# OECD ECONOMIC STATISTICS

*OECD economic statistics for 25 countries are available in printed publications, and on magnetic tape and microfiches. This wealth of data, available from no other single source, covers the economic situation of individual OECD countries as well as the OECD area as a whole.*

## MONTHLY PUBLICATIONS

**Main Economic Indicators**
Tables and graphs showing recent developments in national accounts, industrial production, deliveries, stocks and orders, construction activity, retail and wholesale trade, labour force, wages, prices, finance, foreign trade and balance of payments.

**Monthly Statistics of Foreign Trade: Series A**
Summary foreign trade statistics for each OECD country broken down by countries of origin and destination, and volume and average value indices.

## QUARTERLY PUBLICATIONS

**Quarterly Labour Force Statistics**
Tables and graphs showing quarterly changes in the labour force, unemployment and employment by sex, age and industry.

**Quarterly National Accounts**
Quarterly statistics covering final expenditures on GDP and its industrial origin, the composition of final consumption and capital formation.

**Indicators of Industrial Activity**
Monthly and quarterly indices of output, deliveries, orders, prices and employment in mining, manufacturing and utilities, and quarterly data from surveys of business conditions (published jointly with the OECD Industrial Analysis Division).

## ANNUAL PUBLICATIONS

**Labour Force Statistics**
Detailed statistics on population, labour force, employment and unemployment, broken down by sex, employment status and industry.

**National Accounts** *(2 volumes)*
National accounts statistics compiled according to the joint UN-OECD *System of National Accounts.*
*Volume I:* Main Aggregates;
*Volume II:* Detailed Tables.

**Foreign Trade by Commodities: Series C** *(2 volumes)*
Matrix tables showing trade between OECD countries and partner countries for commodity groups defined at the 1 and 2-digit levels of the *Standard International Trade Classification.* Separate volumes are published for exports and imports.

**Historical Statistics**
Analytical statistics showing long-term trends and structure of major economic variables such as national income, population, employment, foreign trade, prices, wages, interest rates, money supply and finance (published as a companion volume to the July *Economic Outlook).*

## MAGNETIC TAPES

Magnetic tape versions of the publications listed above are also available; they contain the same series as the printed publications but for longer time periods. Tapes are also available for quarterly balance of payments statistics, leading and cyclical indicators, and stocks of fixed capital. In addition, selected parts of the computerized foreign trade file, which contains detailed time series of imports and exports according to the *Standard International Trade Classification,* can be provided on magnetic tape or computer listings.

## MICROFICHES

**Series B: Trade by country**
Statistics of a single year's trade for each OECD country, giving full commodity and partner country detail.

**Series C: Trade by commodity**
Statistics of a single year's trade in commodities and groups of commodities between OECD countries and trade partners.

# LES STATISTIQUES ÉCONOMIQUES DE L'OCDE

*Les statistiques économiques de l'OCDE portent sur vingt-cinq pays et sont disponibles sous forme de publications, de bandes magnétiques et de microfiches. Cette masse de données, qu'aucune autre source ne peut fournir dans leur totalité, couvre à la fois la situation économique des divers pays Membres et celle de la zone de l'OCDE dans son ensemble.*

## PUBLICATIONS MENSUELLES

**Principaux indicateurs économiques**
Tableaux et graphiques retraçant l'évolution récente des comptes nationaux, de la production industrielle, des livraisons, stocks et commandes, de l'activité de la construction, commerce de gros et de détail, de la population active, des salaires, des prix, des finances, du commerce extérieur et de la balance des paiements.

**Statistiques mensuelles du commerce extérieur : Série A**
Statistiques récapitulatives du commerce extérieur de chaque pays de l'OCDE, ventilées par pays d'origine et de destination ainsi que les indices de volume et de valeurs moyennes.

## PUBLICATIONS TRIMESTRIELLES

**Statistiques trimestrielles de la Population active**
Tableaux et graphiques présentant les variations trimestrielles de la population active, du chômage et de l'emploi par sexe, âge et branche d'activité.

**Comptes nationaux trimestriels**
Données trimestrielles donnant la ventilation du PIB par emplois et par genres d'activité, la composition de la consommation finale et de la formation de capital.

**Indicateurs des activités industrielles**
Indices mensuels et trimestriels concernant la production, les livraisons, les commandes, les prix et l'emploi dans les industries extractives et manufacturières et les entreprises de services publics, et données trimestrielles tirées d'enquêtes de conjoncture (publiés conjointement avec la division des Analyses industrielles).

## PUBLICATIONS ANNUELLES

**Statistiques de la Population active**
Statistiques détaillées sur la population, la population active, l'emploi et le chômage, ventilées par sexe, situation dans la profession et branche d'activité.

**Comptes nationaux** *(2 volumes)*
Statistiques des comptes nationaux établies à partir du *Système de comptabilité nationale* commun aux Nations-Unies et à l'OCDE.
*Volume I :* Principaux agrégats;
*Volume II :* Tableaux détaillés.

**Commerce extérieur par produits : Série C**
*(2 volumes)*
Tableaux présentant sous forme matricielle les échanges entre les pays de l'OCDE et leurs partenaires commerciaux pour des catégories de produits correspondant aux sections et divisions (un et deux chiffres) de la *Classification type pour le commerce international.* Les exportations et les importations font l'objet de volumes séparés.

**Statistiques rétrospectives**
Données analytiques retraçant l'évolution à long terme et la structure de grandes variables économiques comme le revenu national, la population, l'emploi, le commerce extérieur, les prix, les salaires, les taux d'intérêt, la masse monétaire et les finances (volume publié en complément des *Perspectives Économiques* du mois de juillet).

## BANDES MAGNÉTIQUES

Les publications énumérées ci-dessus existent aussi sous forme de bandes magnétiques; celles-ci contiennent les mêmes séries que les ouvrages imprimés mais couvrent des périodes plus longues. Il existe aussi des bandes magnétiques pour les statistiques trimestrielles de la balance des paiements, les indicateurs avancés et conjoncturels, et les stocks de capital fixe. Il est également possible d'obtenir sur bandes magnétiques ou listing certains extraits du fichier informatique du commerce extérieur, qui contient des séries chronologiques détaillées des importations et des exportations regroupées suivant la *Classification type pour le commerce international.*

## MICROFICHES

**Série B : Commerce par pays**
Statistiques commerciales relatives à une année donnée pour chaque pays de l'OCDE, avec ventilation complète par produits et par pays partenaires.

**Série C : Échanges par produits**
Statistiques des échanges entre les pays de l'OCDE et leurs partenaires commerciaux, relatives à une année donnée, par produits et groupes de produits.

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT
ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

# INTRODUCTION

*National Accounts* is published in two separate volumes.

The **first volume** gives for each country the main aggregates calculated according to either the present (1) or the former (2) Systems of National Accounts. After a summary of the definitions of these main aggregates, this volume is divided into four parts.

**Part one** contains graphs for each country showing the growth from **1961 to 1982,** in real terms, of *Gross domestic product* and *expenditure.*

**Part two** gives for the OECD as a whole, OECD-Europe, EEC, and for each country the main aggregates in national currencies from **1982** back to **1953** where possible, followed by "growth triangles" for the main components of final expenditure. These triangles are made up of geometric average annual rates of change in per cent between any two years within the period **1972-1982.**

**Part three** gives a set of comparative tables (US dollars, volume and price indices, population and exchange rates), with totals for groups of countries and for the OECD as a whole. For the comparative tables the national accounts data have been converted into U.S. dollars using market or official exchange rates (3). It must be emphasized that these rates do not necessarily reflect the relationships between the internal purchasing powers of currencies and may consequently distort intercountry comparisons of GDP and its components.

**Part four** contains a new set of comparative tables using **purchasing power parities.** These tables are mainly based on the parities calculated for 1980 by the Statistical Office of the European Communities (Eurostat) for 12 European countries, but the OECD Secretariat has linked them to parities for other OECD countries using the results of the United Nations International Comparison Project for the year 1975. Readers are advised to refer to the detailed explanatory notes contained in part four.

The **second volume** gives each country's detailed statistics for the period 1965-1982. To the extent that data are available, the following tables are shown:

1. Main aggregates.
2. Gross domestic product by kind of economic activity, at current and constant prices.

---

1. A *System of National Accounts* (Series F. No 2, Rev 3) New York United Nations 1968.
2. *A System of National Accounts and Supporting Tables* (Series F, No. 2, Rev 2) New York, United Nations, 1964.
3. The rates used are the period average market rates/par or central rates shown in *International Financial Statistics* published by the International Monetary Fund.

Les *Comptes nationaux* sont publiés en deux volumes séparés.

Le **premier volume** présente pour chaque pays les principaux agrégats de comptabilité nationale évalués conformément soit au nouveau (1) soit à l'ancien (2) Système de Comptabilité Nationale. Après un rappel sommaire des définitions suivant les deux systèmes de ces principaux agrégats, ce volume se divise en quatre parties.

La **première partie** présente, sous forme de graphiques, l'évolution de **1962 à 1982** en termes de volume du *Produit intérieur brut* et de ses *emplois.*

La **deuxième partie** comprend pour l'OCDE-Total, l'OCDE-Europe, la CEE et pour chaque pays les données en monnaies nationales des principaux agrégats de **1953,** si possible, à **1982,** suivies de «triangles de croissance» pour les principales composantes de la dépense. Ces triangles de croissance sont composés de moyennes géométriques de pourcentages annuels de variation enregistrées entre deux années quelconques de la période **1972-1982.**

La **troisième partie** fournit un ensemble de tableaux comparatifs (dollars, indices de volume et de prix, population et taux de change) avec les groupes de pays (OCDE-Europe et CEE) Pour les tableaux comparatifs, les données des comptes nationaux ont été converties en dollars E.-U. en utilisant le taux de change du marché ou le taux de change officiel (3). Il faut souligner que ces taux ne reflètent pas nécessairement les rapports entre les pouvoirs d'achat intérieurs des monnaies et peuvent donc rendre inexactes les comparaisons entre le PIB et ses composantes d'un pays à l'autre.

**La quatrième partie** contient un nouvel ensemble de tableaux comparatifs établi à partir des **parités de pouvoir d'achat.** Ces tableaux sont essentiellement basés sur les parités calculées pour 1980 par l'Office Statistique des Communautés Européennes (Eurostat) pour 12 pays européens; cependant, le Secrétariat de l'OCDE les a raccordées aux parités d'autres pays de l'OCDE en utilisant les résultats du Projet de Comparaison Internationale des Nations Unies pour l'année 1975. Il est conseillé aux lecteurs de se reporter aux notes explicatives détaillées de la quatrième partie.

Le **deuxième volume** présente les statistiques détaillées de chaque pays pour la période 1965-1982. Dans la mesure de la disponibilité des données, les tableaux montrés sont les suivants :

1. Principaux agrégats.
2. Produit intérieur brut par genre d'activité économique, à prix courants et à prix constants.

---

(1) Système de *Comptabilité nationale* (série F, nº 2, Rev 3) Nations Unies, New York, 1970.

(2) *Système de Comptes nationaux et Tableaux connexes* (série F, nº 2. Rev 2), Nations Unies, New York, 1964.

(3) Les taux utilisés sont les moyennes mensuelles des taux du marché/parité ou taux central montrés dans *International Financial Statistics* publié par le Fonds Monétaire International.

3. Government final consumption expenditure according to purpose, at current and constant prices.
4. Composition of gross capital formation, at current and constant prices.
5. Private final consumption expenditure by object, at current and constant prices.
6. Distribution of national disposable income.
7. Financing of gross capital formation.
8. Income and outlay transactions of households.
9. Income and outlay transactions of General Government.
10. Income and outlay transactions of Central Government.
11. Income and outlay transactions of State and local Government.
12. Income and outlay transactions of Social Security Funds.
13. Income and outlay transactions of non-financial corporate and quasi-corporate enterprises.
14. Income and outlay transactions of financial institutions.
15. External transactions.

A table on page 6 of Volume II shows which of these data are available for each country. The explanatory notes to the tables appear at the end of each country section.

Five annexes are included at the end of volume II. **Annex I** gives selected outlays of General Government by function; **Annex II** gives employment by kind of economic activity; **Annex III** gives profit shares and rates of return on fixed capital; **Annex IV** is a glossary of the technical terms used in the present System of National Accounts (S.N.A.); **Annex V** gives a full set of English and French translations of the item descriptions in the detailed country tables.

The national accounts in both volumes have been prepared from statistics reported to the OECD by Member countries in their answers to successive *National Accounts Questionnaires.* These questionnaires are designed to collect internationally comparable data according to either the *Present* S.N.A. or the *Former* S.N.A Although Member countries have all agreed to adopt the *Present* S.N.A. a number are still using the earlier system or can give data for only a few years according to the *Present* S.N.A. The country tables in both volumes indicate the system used by each country. There are numerous differences between the *Present* S.N.A. and the earlier system as regards valuation, classifications and definitions, and these must be taken into account when comparing data compiled according to different systems.

**The following signs and abbreviations are used:**

* : Secretariat estimates
. . : not available
— : nil or negligible

3. Consommation finale des administrations publiques par fonction, à prix courants et à prix constants.
4. Composition de la formation brute de capital, à prix courants et à prix constants.
5. Consommation finale privée, à prix courants et à prix constants.
6. Répartition du revenu national disponible.
7. Financement de la formation brute de capital.
8. Opérations courantes (revenu et dépenses) des ménages.
9. Opérations courantes (revenu et dépenses) des Administrations publiques.
10. Opérations courantes (revenu et dépenses) de l'Administration Centrale.
11. Opérations courantes (revenu et dépenses) des Administrations locales.
12. Opérations courantes (revenu et dépenses) des Administrations de Sécurité Sociale.
13. Opérations courantes (revenu et dépenses) des Sociétés et Quasi-Sociétés non financières.
14. Opérations courantes (revenu et dépenses) des institutions financières.
15. Transactions extérieures.

La disponibilité de ces données est précisée dans le tableau page 6, et les notes explicatives relatives aux tableaux apparaissent à la fin du chapitre du pays.

Cinq annexes sont incluses à la fin du volume II. L'**Annexe I** présente les dépenses choisies des administrations publiques par fonction; l'**Annexe II** présente l'emploi de la main-d'œuvre par genre d'activité économique; l'**Annexe III** présente la part des bénéfices et les taux de rendement du capital fixe; l'**Annexe IV** est un glossaire des termes techniques utilisés dans le nouveau Système de Comptabilité Nationale (S.C.N.); l'**Annexe V** comprend les traductions anglaise et française des rubriques des tableaux par pays.

Les deux volumes des comptes nationaux sont préparés à l'aide de l'information statistique fournie à l'OCDE par les pays Membres dans leurs réponses aux *Questionnaires des comptes nationaux* des dernières années. Ces questionnaires sont destinés à rassembler des données comparables au niveau international et conformes soit au *nouveau* S.C.N. ou à l'*ancien* S.C.N. Bien que tous les pays Membres aient été d'accord pour adopter le *nouveau* S.C.N., un certain nombre de pays utilisent encore le système précédent ou ne peuvent fournir des données que pour quelques années suivant le *nouveau* S.C.N. Les pages de couverture des tableaux par pays dans le volume II spécifient le système utilisé par chaque pays. Il existe de nombreuses différences entre le *nouveau* S.C.N. et le système précédent en ce qui concerne les évaluations, les classifications et les définitions et il faut en tenir compte lorsqu'on compare des données compilées selon des systèmes différents.

**Les signes et abréviations utilisés sont les suivants :**

* : estimations du Secrétariat
. . : non disponible
— : nul ou négligeable

. : decimal point
billion : thousand million
r.o.w. : rest of the world
n.e.c. : not elsewhere classified
c.i.f. : cost, insurance and freight
f.o.b. : free on board

# DEFINITION OF MAIN AGGREGATES

# DÉFINITION DES PRINCIPAUX AGRÉGATS

## 1. Private final consumption expenditure

*In present SNA :* The sum of (*i*) the expenditure of resident households as consumers on non-durable and durable goods, except land, and on services, reduced by their net sales (sales *less* purchases) of second-hand goods, scraps and wastes, and (*ii*) the excess of the gross output of the producers of private non-profit services to households over the sum of their sales of services and new goods and their own-account production of fixed assets which is not separated out as an industry. It is equivalent to the sum of (*i*) the purchases, *less* sales of goods and services by households and of non-durable goods and services by the private non-profit services, reduced by the value of the own-account production of fixed assets mentioned above and (*ii*) the compensation of employees, consumption of fixed assets and payments of indirect taxes by the private non-profit services.

The expenditure of resident households includes (*i*) their purchases abroad, apart from outlays in connection with business, (*ii*) the value of receipts *less* disbursements of gifts in kind in respect of the rest of the world, (*iii*) the imputed gross rent of owner-occupied dwellings, (*iv*) where appropriate, food and other items produced on own-account and consumed, valued at producers' values and (*v*) wages and salaries in kind, such as food, shelter, clothing, valued at cost to the employer.

The purchases of the private non-profit services include transfers in kind of non-durable goods and services from government services, industries and the rest of the world.

*Differences in the former systems*. In the former systems included are (*i*) the final consumption expenditure of the private non-profit bodies mainly serving households or government which are entirely, or mainly, financed and controlled by the public authorities, (*ii*) the outlays of private non-profit bodies on machinery and equipment, (*iii*) an imputation of a bank service charge to households and (*iv*) household payments of motor vehicle taxes and similar government levies ; and excluded are (*i*) the consumption of fixed assets in respect of machinery and equipment by private non-profit bodies, (*i*) nominal fees paid by individuals for government services or for the services of industries and private non-profit bodies, which are to be treated as government purchases, and (*iii*) government payments directly to industries and private non-profit bodies for services rendered directly to individuals which should be classed as the individuals' purchases in the case of the present SNA. (In the former SNA only).

## 2. Government final consumption expenditure

*In present SNA :* The excess of the gross output of government services over the sum of their sales of services and new goods and the value of their own account production of fixed assets which is not segregated as an industry. It is equivalent to the sum of (*i*) purchases, *less* sales, of goods and services on current account, reduced by the value of the aforementioned own account production of fixed assets, (*ii*) compensation of employees, (*iii*) consumption of fixed assets and (*iv*) any payments of indirects taxes.

Goods and services on current account cover (*i*) non-

## 1. Consommation finale privée

*Dans le nouveau SCN :* Somme *i*) des dépenses faites par les ménages résidents, en tant que consommateurs, au titre de biens durables et non durables (à l'exception des terres) et au titre de services, diminuées de leurs ventes nettes (ventes *moins* achats) de biens d'occasion, de rebuts et de déchets, et *ii*) de l'excédent de la production brute des institutions privées sans but lucratif desservant les ménages sur la somme de leurs ventes de services et de biens neufs et de leur production de biens de capital fixe pour compte propre qui n'est pas classée comme branche d'activité marchande distincte. Cette valeur est égale à la somme des éléments suivants : *i*) les achats (*moins* les ventes) de biens et services effectués par les ménages et les achats de biens non durables et de services effectués par les institutions privées sans but lucratif, diminués de la valeur de la production de biens de capital fixe pour compte propre mentionnée ci-dessus, et *ii*) la rémunération des salariés, la consommation de biens de capital fixe et les paiements d'impôts indirects des organismes privés sans but lucratif.

Les dépenses des ménages résidents comprennent *i*) les achats qu'ils font à l'étranger, exception faite des dépenses liées à des activités commerciales, *ii*) la valeur des dons en nature reçus du reste du monde, diminuée des paiements correspondants, *iii*) le loyer brut imputé des logements occupés par leurs propriétaires, *iv*) lorsqu'il y a lieu, les produits alimentaires et autres qui sont produits pour compte propre et consommés, à la valeur au départ de l'unité de production, et *v*) les traitements et salaires en nature, tels que les denrées alimentaires, le logement et l'habillement, évalués au prix payé par l'employeur.

Les achats de produits et de services rendus aux ménages par les institutions privées sans but lucratif comprennent les transferts en nature de biens non durables et de services provenant de services des administrations publiques, de branches d'activité marchande et du reste du monde.

*Différences entre les anciens systèmes et le nouveau SCN.* La définition des anciens systèmes : *i*) la consommation finale des organismes privés sans but lucratif desservant essentiellement les ménages ou les administrations publiques, qui sont entièrement ou principalement financés et contrôlés par les pouvoirs publics, *ii*) les dépenses consacrées par les organismes privés sans but lucratif aux machines et au matériel, *iii*) l'imputation des frais bancaires aux ménages, *iv*) les paiements de taxes sur les véhicules à moteur et autres redevances payables aux administrations publiques par les ménages ; elle exclut : *i*) la consommation de biens de capital fixe correspondant à l'utilisation de machines et de matériel par des institutions privées sans but lucratif, *ii*) les paiements nominaux faits par des particuliers au titre de services rendus par les administrations publiques ou au titre de services rendus par des branches d'activité marchande et des institutions privées sans but lucratif, qui doivent être considérées comme des achats des administrations publiques, et *iii*) les paiements effectués directement par les administrations publiques en faveur de branches d'activité marchande et d'organismes sans but lucratif pour des services fournis directement à des particuliers, qui doivent être considérés dans le nouveau SCN comme des achats des particuliers (dans l'ancien SCN seulement).

## 2. Consommation finale des administrations publiques

*Dans le nouveau SCN :* Excédent de la production brute des services des administrations publiques sur la somme de leurs ventes de services et de biens neufs et de la valeur de leur production de biens de capital fixe pour compte propre qui ne peut être mise à part comme branche d'activité marchande distincte. Cette valeur est l'équivalent de la somme *i*) des achats (*moins* les ventes) de biens et services en compte courant, diminués de la valeur de la production de biens de capital fixe pour compte propre mentionnée

durable goods and scraps thereform, except commodities held in stocks of special importance to the nation and sales, including grants, of large quantities of surplus goods, (*ii*) durable goods, except land, used primarily for military purposes and (*iii*) all services. The purchases cover transfers in kind received from foreign government but exclude commodities purchased from industries and granted to foreign governments or to private non-profit services to households. Also included are services and goods which industries and the private non-profit services furnish directly to individuals when these items should be treated as purchased by government. The sales cover (*i*) voluntary payments to government in respect of dispositions of goods and services on current account and (*ii*) grants of similar second hand goods to foreign governments and to private non-profit services.

*Differences in the former systems.* In the former systems included are (*i*) the military surplus and equipment purchased from industries and granted to foreign governments; (*ii*) the operating surplus (net rent) of buildings owned and occupied by government services, (*iii*) royalties paid for patents, copyrights, etc., by General Government (in the former SSNA only), and (*iv*) government payments directly to industries and private non-profit bodies for services furnished directly to individuals which should in the present SNA be considered as the individuals' purchases (in the former SNA only) but excluded are (*i*) the final consumption expenditure of the private non-profit bodies classed as government services in the present SNA, (*ii*) the military supplies and equipment granted by foreign governments and (*iii*) depreciation of government equipment and machinery used for civilian purposes; and not deducted are the nominal fees paid by individuals for government services or for the services of industries or private non-profit bodies which should be classed as government purchases.

### 3. Gross fixed capital formation

*In present SNA:* The outlays (purchases and own-account production) of industries, producers of government services and producers of private non-profit services to households on additions of new and imported durable goods to their stocks of fixed assets, reduced by the proceeds of their net sales (sales *less* purchases) of similar second-hand and scrapped goods. Excluded is the outlay of government services on durable goods primarily for military purposes. Included are (*i*) dealers' margins and other transfer costs only in respect of transactions in land, mineral deposits, timber tracts etc., (*ii*) outlays on the reclaiming and improving of land, (*iii*) expenditure on developing and extending timber tracts, mines, plantations, orchards, vineyards, etc. and (*iv*) outlays on alterations in, and additions to, fixed assets which significantly extend their life time of use, or increase their productivity. Outlays on repair and maintenance in order to keep fixed assets in good working condition are classed as current expenditure. Breeding and draught animals, dairy cattle, animals raised for wool clip are, in principle, to be classed as fixed assets, but it may be necessary to include some of these animals in increases in stocks.

ci-dessus, *ii*) de la rémunération des salariés, *iii*) de la consommation de biens de capital fixe, *iv*) de tous paiements d'impôts indirects.

Les biens et services en compte courant comprennent *i*) les biens non durables et les déchets qui en proviennent, à l'exception des stocks de produits d'une importance particulière pour la nation et les ventes et dons de grosses quantités de stocks excédentaires, *ii*) les biens durables, à l'exclusion des terres, utilisés essentiellement à des fins militaires, *iii*) tous les services. Les achats comprennent les transferts en nature reçus de gouvernements étrangers, mais ne comprennent pas les biens et services marchands achetés à des branches d'activité marchande et cédés en tant que dons à des gouvernements étrangers ou à des institutions privées sans but lucratif desservant les ménages. Ils comprennent également les services et biens que les branches d'activité marchande et les institutions privées sans but lucratif fournissent directement à des particuliers lorsqu'il y a lieu de considérer que ces biens et services ont été achetés par des administrations publiques. Les ventes comprennent *i*) les paiements faits librement aux administrations publiques pour la vente de biens et services en compte courant, *ii*) les dons de biens d'occasion analogues faits à des gouvernements étrangers et à des institutions privées sans but lucratif.

*Différences entre les anciens systèmes et le nouveau SCN.* La définition des anciens systèmes comprenait *i*) les fournitures et matériels militaires achetés à des branches d'activité marchande et octroyés en tant que dons à des gouvernements étrangers, *ii*) l'excédent d'exploitation (loyer net imputé) des bâtiments qui appartiennent à des services des administrations publiques et qui sont occupés par eux, *iii*) les droits de brevets, droits d'auteur, etc., payés par l'Etat (dans l'ancien SNCN seulement), et *iv*) les paiements effectués directement par les administrations publiques en faveur des branches d'activité marchande et d'organismes sans but lucratif pour des services fournis directement à des particuliers, qui doivent être considérés dans le nouveau SCN comme des achats des particuliers (dans l'ancien SCN seulement); mais elle ne comprenait pas *i*) les dépenses de consommation finale des organismes privés sans but lucratif qui, selon le nouveau SCN, sont considérés comme des services des administrations publiques, *ii*) les fournitures et le matériel militaire reçus en dons de gouvernements étrangers, *iii*) l'amortissement de matériel et de machines appartenant aux administrations publiques et utilisés à des fins civiles. Ne sont pas déduits les paiements nominaux faits par les particuliers pour les services des administrations publiques ou pour les services de branches d'activité marchande ou d'organismes privés sans but lucratif, qui doivent être considérés comme des achats des administrations publiques.

### 3. Formation brute de capital fixe

*Selon le nouveau SCN:* Dépenses (achats et production pour compte propre) que les branches d'activité marchande, les producteurs des services rendus par les administrations publiques et des services rendus aux ménages par les organisations privées sans but lucratif effectuent pour ajouter des biens durables neufs et importés à leurs biens de capital fixe, ces dépenses étant diminuées de leurs ventes nettes (ventes *moins* achats) de biens analogues d'occasion ou de rebut. Ne sont pas comprises les dépenses consacrées par les administrations publiques à des biens durables destinés essentiellement à des utilisations militaires. Sont comprises *i*) les marges des intermédiaires et autres frais de transfert se rapportant uniquement aux transactions relatives à des terres, des gisements miniers, des forêts, etc., *ii*) les dépenses consacrées à la remise en valeur ou à l'amélioration des terres, *iii*) les dépenses consacrées à l'exploitation et l'extension des forêts, des mines, plantations, vergers, vignobles, etc., *iv*) les dépenses consacrées à améliorer ou à modifier les actifs fixes de façon à en augmenter notablement la durée de l'usage ou la productivité. Les dépenses d'entretien et de réparation destinées à maintenir les biens de capital fixe en bon état de fonctionnement sont considérées comme des dépenses courantes. Les animaux de reproduction et de trait, les vaches laitières, les animaux qui sont élevés pour la laine doivent en principe, être classés comme biens de capital fixe, mais il peut être nécessaire de comprendre certains de ces animaux dans les variations de stocks.

The value of the additions to fixed assets should cover all costs directly connected with the acquisition and installation of the fixed assets for use, e.g. purchase price, custom and other indirect taxes, transport, delivery and installation charges, site clearance, planning and designing costs, legal fees. The costs of financing the additions, such as flotation costs, underwriters' commisions, advertising bond issues, are excluded. It may be necessary to value fixed assets produced on own-account at explicit cost instead of producers' values.

The acquisition of fixed assets is to be recorded at the moment when the ownership of the goods passes to the buyer. In the case of construction projects this is taken to be at the time that work is put in place.

*Differences in the former systems.* In the former systems included in transactions in second-hand fixed assets are purchases and sales of land, timber tracts, mineral deposits, etc. ; excluded are (*i*) additions to the machinery and equipment of private non-profit bodies mainly serving households or the public authorities, (*ii*) additions to stocks of breeding and draught animals, dairy cattle, etc. and (*iii*) the costs of developing and extending plantations, orchards, vineyards and timber tracts excepting land clearance ; and outlays of an extra-territorial body of a foreign government on construction are allocated to the country where the construction is located instead of the country of the foreign government.

### 4. Increase in stocks

*In present SNA :* The value of the physical change in (*i*) stocks of raw materials, work in progress (other than work put in place on structures, roads and other construction projects) and finished goods held by industries and (*ii*) stocks of strategic materials or other commodities of importance to the nation held by producers of government services. Excluded in principle are increases in breeding and draught animals, dairy cattle, animals raised for wool clip. Included in principle are changes in stocks of commodities located abroad which are owned by resident units and excluded are stocks held in the country which are owned by non-resident units.
The physical change in stocks during a period of account may be valued at an average of prices ruling over the period. Purchased commodities added to, or withdrawn from, stocks should, in principle, be valued at purchasers' values. Commodities processed internally which are added to, or withdrawn from, stocks should, in principle, be valued at producers' values, but it may be practicable to use explicit costs only.

*Differences in the former systems.* In the former systems, in principle, (*i*) included are changes in the stocks of breeding stocks, draught animals, dairy cattle, etc. and (*ii*) additions to, and withdrawals from, stocks of commodities internally processed are to be valued at cost.

### 5. Exports and imports of goods and services

*In present SNA :* The value of all goods and services which residents sell to, and purchase from, non-residents. The categories of these goods and services are defined in Table 6.4 of *A System of National Accounts* (Series F, N°2, Rev.3) U.N., 1968.
The major category « exports and imports of merchandise » is broadly speaking the equivalent of general exports and imports of merchandise in international trade statistics, with the additions and omissions which are given in the afore-

La valeur des acquisitions de biens de capital fixe doit englober tous les coûts directement en rapport avec l'acquisition de ces biens et leur installation aux fins d'utilisation, par exemple le prix d'achat, les droits de douane et autres redevances indirectes, les frais de transport, de livraison et d'installation, l'aménagement des chantiers, le coût des plans et des études techniques, les frais juridiques. Les dépenses afférentes au financement des acquisitions, par exemple frais d'émission de titres, frais de souscription, campagnes de publicité pour annoncer les émissions d'obligations, ne sont pas comprises. Il peut être nécessaire d'évaluer les biens de capital fixe produits pour compte propre sur la base des coûts explicites et non d'après le prix à la production.
L'acquisition de biens de capital fixe par un acheteur doit être enregistrée au moment où il en prend juridiquement possession. Dans le cas des travaux de construction, ce moment est en principe celui où les travaux sont réalisés.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes les opérations sur actifs fixes d'occasion comprenaient les achats et ventes de terrains, de forêts, de gisements miniers, etc., et ne comprenaient pas *i*) les acquisitions de machines et de matériel faites par les organismes privés sans but lucratif desservant principalement les ménages ou les administrations publiques, *ii*) les augmentations des stocks d'animaux de reproduction et d'animaux de trait, de vaches laitières, etc., *iii*) le coût de l'exploitation et de l'extension des plantations, vergers, vignobles et forêts, à l'exception de l'aménagement du terrain, et les dépenses des organismes extra-territoriaux d'un gouvernement étranger au titre de travaux de construction étaient imputées au pays où les ouvrages étaient situés et non pas au pays du gouvernement étranger.

### 4. Variations de stocks

*Selon le nouveau SCN :* Valeur de la variation physique *i*) des stocks de matières premières, des travaux en cours (autres que le travail effectué sur les édifices, routes et autres ouvrages de construction) et des produits finis qui se trouvent en possession des entreprises, et *ii*) des stocks de matériaux stratégiques et autres biens marchands d'importance particulière pour la nation qui se trouvent en possession des producteurs des services rendus par les administrations publiques. En principe, les variations de stocks ne comprennent pas les variations relatives aux animaux de reproduction et de trait, les vaches laitières et les animaux qui sont élevés pour la laine. En principe, les variations des stocks de biens se trouvant à l'étranger et appartenant à des unités résidentes doivent être comprises, tandis que les variations des stocks de biens se trouvant dans le pays mais appartenant à des unités non résidentes doivent être exclues.
On peut évaluer la variation physique des stocks pendant une période comptable sur la base d'un prix moyen pour la période. Les produits achetés qui sont ajoutés aux stocks ou retirés des stocks doivent, en principe, être évalués à la valeur d'acquisition. Les augmentations et prélèvements liés aux fabrications de l'entreprise doivent être, en principe, évalués à la valeur à la production ; mais il se peut que l'on ne puisse utiliser que les coûts explicites pour cette évaluation.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes, en principe, *i*) les variations relatives aux animaux de reproduction et de trait, aux vaches laitières, etc., étaient comprises, *ii*) les augmentations et prélèvements liés aux fabrications des entreprises devaient être évalués au prix coûtant.

### 5. Exportations et importations de biens et services

*Selon le nouveau SCN :* Valeur de tous les biens et services que les résidents vendent et achètent aux non-résidents. Les catégories de biens et services considérés sont définies dans le tableau 6.4 du *Système de comptabilité nationale* (série F, n°2, Rev.3), N.U. 1970.
La grande catégorie « exportations et importations de marchandises » est, dans l'ensemble, l'équivalent des exportations et importations générales de marchandises dans les

mentioned Table 6.4. International trade statistics necessarily furnish a main basis for compiling data in respect of this category; and the exports or imports of merchandise are often recorded in international trade statistics of a country at the time at which they physically cross out of, or into, her domestic territory. If exports and imports of goods and services are none the less to be recorded in the national accounts at the moment at which a transfer of the ownership takes place between residents and non-residents, the statistics of international trade on merchandise must be adjusted for sales to, and purchases from, non-residents which have not yet crossed the boundaries of the country.

*Differences in the former systems.* In the former systems (*i*) the outlays of extra-territorial bodies of foreign governments and international agencies on the construction of buildings and other non transportable fixed assets for civilian use are covered in the gross fixed capital formation of the country where the construction takes place, not in the exports of the country of the foreign government, (*ii*) grants of military supplies and equipment by one government to another are excluded from the exports of the donor country and the imports of the receiving country and (*iii*) in former SSNA only: royalties for patents, copyrights, etc., were included in the exports when paid by the rest of the world, in the imports when paid to them.

## 6. Gross domestic product

*In present SNA:* The sum of the items in respect of final expenditure on goods and services, in purchasers' values, *less* the c.i.f. value of imports of goods and services; or the sum of the value added of resident producers, in producers' values, *plus* import duties. The value added of resident producers is equivalent to the difference between the value of their gross output, in producers' values, and the value of their intermediate consumption, in purchasers' values; or to the sum of their compensation of employees, operating surplus, consumption of capital assets and excess of indirect taxes over subsidies.

*Differences in the former systems.* In the former systems included are (*i*) operating surplus (net rent) in respect of buildings owned and occupied by government, (*ii*) motor vehicle duties and similar government levies paid by households and (*iii*) bank service charges to households; excluded are charges in respect of the consumption of machinery and equipment of government and private non-profit services; private non-profit bodies primarily serving business which are entirely, or mainly, financed and controlled by the public authorities are classified as enterprises (industries) rather than as government services; and additions to, and withdrawats from, stocks of internally processed commodities are, in principle, valued at explicit costs rather than at producers' values.

## 7. Compensation of employees

*In the present SNA and the former systems:* (*i*) all wages and salaries, in cash and in kind, paid to employees, (*ii*) the contributions made by employers to social security schemes in respect of their employees and (*iii*) the contributions, paid or imputed, made by employers to private pension arrangements, family allowances, health insurance, lay-off and severance pay and other casualty insurance, life insurance and similar schemes in respect of their employees.

statistiques du commerce international, sauf les additions et exclusions indiquées dans le tableau 6.4 susmentionné. Les statistiques du commerce international fournissent nécessairement une base essentielle pour le rassemblement de données relatives à cette catégorie; et les exportations ou importations de marchandises sont souvent enregistrées dans les statistiques du commerce international d'un pays au moment où les marchandises franchissent la frontière. Si les exportations et les importations de biens et services doivent néanmoins être enregistrées dans la comptabilité nationale au moment où s'effectue le transfert de propriété entre résidents et non-résidents, les statistiques du commerce international de marchandises doivent être ajustées compte tenu des biens vendus ou achetés à des non-résidents et qui n'ont pas encore franchi la frontière du pays.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes *i*) les dépenses consacrées par les organismes extra-territoriaux de gouvernements étrangers et par des organisations internationales à la construction de bâtiments et d'autres biens de capital fixe inamovibles à des fins civiles sont comprises dans la formation brute de capital fixe des pays où la construction a lieu, non dans les exportations de ce pays et dans la formation brute de capital fixe du pays étranger, *ii*) les dons de fournitures et de matériel militaires d'un gouvernement à un autre ne sont pas compris dans les exportations du pays donateur ni dans les importations du pays bénéficiaire et *iii*) (dans l'ancien SNCN seulement) les droits de brevets, les droits d'auteur étaient inclus dans les exportations lorsqu'ils étaient payés par le reste du monde, et dans les importations dans le cas contraire.

## 6. Produit intérieur brut

*Selon le nouveau SCN:* Somme des rubriques des dépenses finales au titre des biens et services, à la valeur d'acquisition, diminuée de la valeur c.a.f. des importations de biens et services; ou somme de la valeur ajoutée par les producteurs résidents, à la valeur à la production, *plus* les droits et taxes sur importations. La valeur ajoutée par les producteurs résidents est égale à la différence entre la valeur de leur production brute, mesurée à sa valeur à la production, et la valeur de leur consommation intermédiaire, mesurée à la valeur d'acquisition; ou bien à la somme de la rémunération des salariés, de l'excédent d'exploitation, de la consommation de capital fixe et de l'excédent des impôts indirects par rapport aux subventions.

*Différences entre les anciens systèmes et le nouveau SCN.* La définition des anciens systèmes comprenait *i*) l'excédent net d'exploitation (loyer net) des bâtiments appartenant aux administrations publiques et occupés par elles, *ii*) les taxes sur les véhicules à moteur et autres redevances analogues payables à l'Etat par les ménages, *iii*) la rémunération des services bancaires imputés au compte des ménages; elle ne comprenait pas les dépenses relatives à la consommation de machines et de matériel des administrations publiques et des organismes privés sans but lucratif desservant les ménages. Les organismes privés sans but lucratif desservant essentiellement les entreprises et financés et contrôlés en totalité ou en majeure partie par les pouvoirs publics étaient classés comme entreprises (branches d'activité marchande) et non pas comme services des administrations publiques, et les augmentations ou diminutions des stocks liées aux fabrications des entreprises étaient en principe évaluées d'après les coûts explicites et non pas selon la valeur à la production.

## 7. Rémunération des salariés

*Selon le nouveau SCN et les anciens systèmes: i*) tous les traitements et salaires versés aux salariés, en espèces aussi bien qu'en nature, *ii*) les contributions que les employeurs versent pour leurs salariés aux caisses de sécurité sociale, et *iii*) les contributions versées ou imputées que les employeurs font pour leurs salariés aux caisses privées de retraite, aux caisses d'allocations familiales, aux systèmes d'assurance médicale, d'indemnités de licenciement et de départ, et à d'autres systèmes d'assurance-dommage, aux caisses d'assurance-vie et autres régimes analogues.

Wages and salaries include commissions, bonuses and tips, cost-of-living allowances, and vacation and sick-leave allowances which are paid directly by employers, but exclude reimbursements of travelling and other expenses incurred by employees for business purposes. Covered are the pay and allowances of members of the armed forces; the fees, salaries, bonuses, etc. of members of the board of directors, managing directors, executives and other employees of incorporated enterprises; and the fees of ministers of religion. Wages and salaries in kind are equivalent to the cost to employers of goods and services furnished to employees free of charge, or at markedly reduced cost, which are clearly and primarily of benefit to the employees as consumers.

## 8. Operating surplus

*In present SNA:* The excess of the value added of resident industries over the sum of their costs of employee compensation, consumption of fixed capital, and indirect taxes reduced by subsidies.

*Differences in the former systems.* In the former systems imputations are included in respect of (*i*) the bank service charges to household final consumption expenditure and (*ii*) the operating surplus (net rent) of buildings, such as office premises, schools, and hospitals, owned and occupied by government services and private non-profit bodies primarily serving businesses which are entirely, or mainly, financed and controlled by the public authorities; and in principle, as well as in practice, additions to, and withdrawals from, stocks of internally processed commodities are to be valued at explicit costs and (*iii*) in former SSNA only, royalties paid for patents or copyrights by the rest of the world (net) or by general government.

## 9. Domestic factor incomes

The compensation of employees and operating surplus originating in domestic production, in other words, included in the value added of resident producers.

## 10. Compensation of employees from the r.o.w., net

Income from, and to, the rest of the world arising from compensation of employees.

## 11. Property and entrepreneurial income from the r.o.w., net

Income from, and to, the rest of the world arising from property and entrepreneurial income.

### a) Property income

*In present SNA:* Property income consists of three items: Interest, dividends and rent.
Interest is income payable and receivable in respect of financial claims such as bank and other deposits, bills and bonds, including public debt, other loans, hire-purchase sales and accounts receivable and payable, including consumers' debt, and the equity of households in life insurance actuarial reserves and pension funds. The dividends payable in respect of deposits in mutual saving banks and saving and loan associations are included.
Dividends consists of income payable and receivable in respect of corporate equity securities and other forms of participation in the equity of private incorporated enterprises, public corporations and co-operatives.

Rents consists of payments for the use of rented (leased) land for agricultural and non-agricultural purposes, excluding any portions of the rents which cover (*i*) maintenance costs and/or real estate taxes in respect of the land or (*ii*)

Sont compris dans les traitements et salaires les commissions, pourboires et primes, indemnités de vie chère, sommes reçues pendant les vacances et jours fériés, congés de maladie, quand ces sommes sont versées directement par les employeurs; le remboursement des frais de voyage, de représentation et autres dépenses encourues à titre professionnel par les salariés n'est pas compris. Les traitements et salaires comprennent également les soldes et indemnités des membres des forces armées; les jetons de présence, salaires, primes, etc., perçus par les membres de conseils d'administration, présidents, directeurs et autres employés d'entreprises constituées en sociétés; les rémunérations des ministres du culte. La valeur des traitements et salaires en nature est équivalente au coût pour l'employeur des biens et services fournis au personnel gratuitement ou à un prix sensiblement réduit et qui sont essentiellement et nettement à l'avantage des salariés en tant que consommateurs.

## 8. Excédent net d'exploitation

*Selon le nouveau SCN:* Excédent de la valeur ajoutée par les branches d'activité marchande résidentes par rapport à la somme de la rémunération des travailleurs, de la consommation de capital fixe et des impôts indirects diminués des subventions d'exploitation.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes des imputations sont faites *i*) au titre de la rémunération des services bancaires dans les dépenses de consommation finale des ménages, *ii*) au titre de l'excédent d'exploitation (loyer net) des bâtiments tels que les bâtiments administratifs, écoles et hôpitaux, appartenant aux administrations publiques et occupés par elles et aux organismes privés sans but lucratif servant principalement les entreprises et qui sont financés et contrôlés en totalité ou en majeure partie par les pouvoirs publics; enfin, en principe, et en pratique également, les augmentations ou diminutions des stocks qui sont liées aux fabrications de l'usine doivent être évaluées sur la base des coûts explicites et *iii*) dans l'ancien SNCN seulement, les droits de brevets et les droits d'auteur (nets) payés par le reste du monde ou par l'Etat.

## 9. Revenu des facteurs issu de la production intérieure

Rémunération des salariés et excédent net d'exploitation issus de la production intérieure, c'est-à-dire compris dans la valeur ajoutée des producteurs résidents.

## 10. Solde de la rémunération des salariés reçu du r.d.m.

Revenu en provenance, et en direction, du reste du monde résultant de rémunération des salariés.

## 11. Solde du revenu de la propriété et de l'entreprise reçu du r.d.m.

Revenu en provenance, et en direction, du reste du monde résultant de revenu de la propriété et de l'entreprise.

### a) Revenu de la propriété

*Selon le nouveau SCN:* Le revenu de la propriété recouvre les intérêts, les dividendes et les loyers.
Les intérêts représentent le revenu effectif à payer et à recevoir au titre de créances financières telles que les dépôts bancaires et autres, billets à ordre, bons, obligations, y compris les titres de la dette publique, autres prêts, ventes à tempérament, sommes à recevoir et à payer, y compris, les crédits à la consommation, et le droit des ménages sur les réserves techniques d'assurance-vie et de pension. Les dividendes payables au titre de dépôts dans les mutuelles d'épargne et les associations d'épargne et de prêts sont compris.
Les dividendes représentent le revenu à payer et à recevoir au titre des actions et autres formes de participation au capital social des entreprises privées constituées en sociétés, des entreprises publiques et des coopératives.
Quant aux loyers, il s'agit des paiements relatifs à l'utilisation à des fins agricoles et non agricoles, des terres

the use of buildings, structures, facilities or equipment on the land; and royalties in respect of concessions concerning mineral deposits or the use of patents, copyrights, trademarks, etc.

*Differences in the former systems.* With respect to interest the former systems differ from the present SNA because in addition to the interest actually due, interest is imputed in respect of the bank deposits of households and enterprises, counter-balancing the bank service charge imputed to them.
There are no differences in the treatment of dividends. Net rent in the former systems is broader in scope because included are actual and imputed net rents in respect of buildings and structures, including buildings owned and occupied by government for civilian purposes. In the former SSNA, however, royalties paid for patents, copyrights, etc. are excluded from proterty income.

b) **Entrepreneurial income**

*In present SNA:* Entrepreneurial income may be classified into two categories by source: that from private unincorporated enterprises and that consisting of withdrawals from the entrepreneurial income of quasi-corporate enterprises. The first is the excess of the operating surplus of the enterprises over the obligations to pay property income, i.e., interest, rents, and royalties incurred in connexion with the business.
Withdrawals from the entrepreneurial income of quasi-corporate enterprises consist of actual payments made to the proprietors of quasi-corporate enterprises out of the entrepreneurial income, i.e., the sum of the operating surplus and the net property income of the enterprises. The withdrawals from quasi-corporate enterprises may be negative; the proprietors may provide funds to the enterprises to compensate for operating losses.

*Differences in the former systems.* In the case of withdrawals from the entrepreneurial income of quasi-corporate enterprises, there existed no such flow in the former SNA.

## 12. Indirect taxes

*In present SNA:* Taxes chargeable to the costs of production of industries, producers of government services and producers of private non-profit services to households in respect of the production, sale, purchase or use of goods and services. Examples are (*i*) import and export duties, (*ii*) excise, entertainment, sales and turnover taxes, (*iii*) real estate and land taxes, unless merely an administrative scheme for collective income tax, (*iv*) levies on value added and the employment of labour, and (*v*) motor vehicle, driving test, licence, airport, passport duties and fees paid by producers. Also included is the operating surplus of fiscal and similar monopolies of government, e.g. in respect of tobacco or of alcoholic beverages, reduced by the normal margin of profit of business units.

*Differences in the former systems.* In the former systems included are household payments to government bodies of motor vehicle and other duties which are not for the purchase of an identifiable service and are mainly designed to raise revenue.

## 13. Subsidies

*In present SNA:* Grants on current account by the public authorities to (*i*) private industries and public corporations

données ou prises à bail, non compris la portion du loyer qui sert à couvrir *i*) les frais d'entretien et, éventuellement, les impôts sur la propriété immobilière frappant les terrains, où *ii*) l'utilisation des bâtiments, constructions, installations ou matériels situés sur ces terres; sont comprises également les redevances relatives à des concessions de gisements miniers, ou à l'utilisation de brevets, de droits d'auteur ou de marques de fabrique et droits analogues.

*Différences entre les anciens systèmes et le nouveau SCN.* En ce qui concerne les intérêts, les anciens systèmes se différencient du nouveau SCN en ce sens qu'en plus de l'intérêt effectivement dû, un intéret est imputé au titre des dépôts en banque des ménages et des entreprises afin d'équilibrer la rémunération des services bancaires qui leur est imputée.
Il n'y a pas de différence dans le traitement des dividendes.

Les loyers nets selon les anciens systèmes ont une acception plus large parce qu'ils comprennent le loyer net, réel et imputé, des bâtiments et autres constructions, y compris les bâtiments appartenant aux administrations publiques et occupés par elles à des fins civiles. Dans l'ancien SNCN, toutefois, les droits de brevets, droits d'auteur, etc., sont exclus du revenu de la propriété.

b) **Revenu de l'entreprise**

*Selon le nouveau SCN:* Revenu des entreprises privées non constituées en société et revenu prélevé par les entrepreneurs des quasi-sociétés. Le premier est équivalent à l'excédent d'exploitation, c'est-à-dire les intérêts, loyers et redevances. Quant au second, il s'agit en principe des sommes effectivement versées aux propriétaires des quasi-sociétés, qui sont prélevées à cet effet sur le revenu de l'entreprise, c'est-à-dire la somme de l'excédent d'exploitation et du revenu net de la propriété de ces entreprises. Dans certains cas, le revenu total de l'entreprise peut être en fait transféré à son propriétaire, ou encore on peut être obligé de supposer qu'il en est ainsi. Les prélèvements sur les revenus des quasi-sociétés peuvent être négatifs; il se peut que des propriétaires versent des fonds aux entreprises pour compenser les pertes d'exploitation.

*Différences entre les anciens systèmes et le nouveau SCN.* La rubrique concernant le revenu prélevé par les entrepreneurs des quasi-sociétés n'existent pas dans les anciens systèmes.

## 12. Impôts indirects

*Selon le nouveau SCN:* Impôts frappant les dépenses de production des branches d'activité marchande, des producteurs des services rendus par les administrations publiques et des producteurs des services rendus aux ménages par les organismes privés sans but lucratif au titre de la production, de la vente, de l'achat ou de l'utilisation de biens et services. Des exemples en sont fournis par *i*) les droits et taxes sur l'importation et l'exportation, *ii*) les droits d'accise et les taxes sur les spectacles, les taxes sur les ventes et le chiffre d'affaires, *iii*) les impôts sur la propriété immobilière bâtie et non bâtie (sauf s'il s'agit d'un simple mode administratif de perception de l'impôt sur le revenu), les taxes sur la valeur ajoutée et sur l'emploi de la main-d'œuvre, et les droits et redevances payés par les producteurs pour les véhicules à moteur, l'examen de permis de conduire, les documents de permis de conduire, les taxes d'aéroport et les passeports. Les excédents d'exploitation des monopoles fiscaux et autres monopoles publics (par exemple, pour la production et la vente du tabac et de l'alcool), diminués de la marge bénéficiaire normale des entreprises, sont également compris.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes sont compris les paiements faits par les ménages aux administrations publiques au titre de droits sur les véhicules à moteur et autres droits analogues, qui ne servent pas à acheter des services identifiables et sont principalement destinés à augmenter les recettes de l'Etat.

## 13. Subventions d'exploitation

*Selon le nouveau SCN:* Sommes en compte courant que les pouvoirs publics allouent *i*) aux entreprises privées et *ii*)

and (*ii*) government enterprises to compensate for losses which are clearly the consequence of the price policies of the public authorities. Excluded are current grants to producers of private non-profit services to households.

*Differences in the former systems.* The former systems include transfers on current account to private non-profit bodies mainly serving business enterprises which are entirely, or primarily, financed and controlled by the public authorities.

### 14. National income

*In present SNA:* The sum of (*i*) the compensation of employees received by residents, (*ii*) the net entrepreneurial and property income of residents and (*iii*) indirect taxes reduced by subsidies.

*Differences in the former systems.* While the formal definition is identical, national income at market prices in the former systems differs from that in the present SNA primarily because included are (*i*) the imputed bank service charges to households, (*ii*) motor vehicle duties and similar levies paid by households and (*iii*) imputed net rents in respect of buildings owned and occupied by government for civilian purposes; and the entrepreneurial income of domestic branches owned by non-residents and the entrepreneurial income of foreign branches owned by residents, are assigned to the owners.

### 15. Other current transfers, net, from the r.o.w.

*In present SNA:* This item consists of casualty insurance transactions and unrequited current transferts, except indirect taxes and subsidies. Net casualty insurance premiums are equivalent to total premiums less imputed service charge in respect of health, accident, fire, theft and other casualty insurance, while casualty insurance claims are claims payable and receivable in respect of casualty insurance.
Unrequited current transfers except indirect taxes and subsidies are defined as non-contractual transfers of income, i.e. do not involve a *quid pro quo*, which are utilized to finance consumption, but not accumulation, and are made out of current income, not out of wealth at infrequent intervals. Examples of these transfers are direct taxes on income, social security contributions and benefits, social assistance grants, grants to finance the current operating expenses of private non-profit institutions serving households, grants between governments to finance military or other consumption expenditure. The categories of unrequited current transferts except indirect taxes and subsidies used in the present SNA are defined in Table 7.1 of *A System of National Accounts.*

*Differences in the former systems.* The scope differs primarily because excluded are (*i*) the counterpart to transfers in kind of military equipment between governments, (*ii*) motor vehicle duties and similar government levies paid by households, (*iii*) unrequited current transfers to private non-profit institutions primarily serving business which are entirely, or mainly, financed, and controlled by the public authorities and (*iv*) current-account grants by corporations to households and to private non-profit institutions primarily serving households or government; not recorded are payments and receipts of unfunded employee welfare benefits and imputed unfunded employee welfare contributions; and included are nominal fees paid by households to government, and consolidated out are current transfers between private non-profit institutions primarily serving households and households. The classification of the transfers is also less detailed than in the present SNA.

aux entreprises publiques pour compenser des pertes qui résultent manifestement de la politique des prix appliquée par les pouvoirs publics. Ne sont pas compris les dons courants faits aux organismes privés sans but lucratif fournissant des services aux ménages.

*Différences entre les anciens systèmes et le nouveau SCN.* Sont compris, dans les anciens systèmes, les transferts en compte courant aux organismes privés sans but lucratif desservant principalement les entreprises qui sont financés ou contrôlés en totalité ou en majeure partie par les pouvoirs publics.

### 14. Revenu national

*Selon le nouveau SCN:* Somme des éléments suivants : *i*) rémunération du travail perçue par les résidents, *ii*) revenu net de l'entreprise et de la propriété des résidents et *iii*) impôts indirects diminués des subventions d'exploitation.

*Différences entre les anciens systèmes et le nouveau SCN.* Quoique le revenu national aux prix du marché selon les anciens systèmes réponde à la même définition théorique que dans le nouveau SCN, il en diffère pour l'essentiel en ce qu'il comprend : *i*) la rémunération des services bancaires imputée aux ménages, *ii*) les droits sur les véhicules à moteur et autres droits analogues payés par les ménages, et *iii*) le loyer net imputé des bâtiments et autres constructions appartenant aux administrations publiques et occupés par elles à des fins civiles ; en outre, le revenu de l'entreprise de succursales intérieures appartenant à des non-résidents ainsi que le revenu de l'entreprise de succursales à l'étranger appartenant à des résidents, sont attribués aux propriétaires.

### 15. Autres transferts courants reçus, nets, du reste du monde

*Selon le nouveau SCN:* Cette rubrique recouvre les opérations concernant les assurances-dommages et les transferts courants sans contrepartie, à l'exception des impôts indirects et des subventions d'exploitation. Les primes nettes d'assurance-dommages représentent la différence entre le total des primes payables et les frais imputés, pour les assurances contre la maladie, les accidents, l'incendie, le vol et autres formes d'assurances accident, alors que les indemnités d'assurance-dommages sont les sommes à payer ou à recevoir à ce titre.
Les transferts courants sans contrepartie, à l'exception des impôts indirects et de subventions d'exploitation, sont les transferts de revenus autres que les transferts synallagmatiques — autrement dit, ils n'impliquent pas un échange — qui servent à financer la consommation mais non pas l'accumulation et qui sont prélevés sur le revenu courant, et non sur la fortune à de très longs intervalles. On peut citer comme exemples de ces transferts, les impôts directs sur le revenu, les cotisations et prestations de sécurité sociale, les allocations d'assistance, les subventions destinées à financer les dépenses courantes d'exploitation des institutions privées sans but lucratif desservant les ménages, les transferts entre gouvernements destinés à financer les dépenses militaires ou d'autres dépenses de consommation. Les catégories de transferts courants sans contrepartie, à l'exception des impôts indirects et subventions, qui sont utilisées dans le nouveau SCN sont définies au tableau 7.1 du *Système de comptabilité nationale.*

*Différences entre les anciens systèmes et le nouveau SCN.* Ces différences, quant à l'extension du concept dont il s'agit, tiennent essentiellement à ce qu'en sont exclus dans l'ancien SNCN) *i*) la contrepartie des transferts en nature de matériel militaire entre gouvernements, *ii*) les droits sur les véhicules à moteur et autres redevances payées à l'Etat par les ménages, *iii*) les transferts courants sans contrepartie aux institutions privées sans but lucratif desservant principalement les entreprises et qui sont financées et contrôlées en totalité ou en majeure partie par les pouvoirs publics, et *iv*) les versements et dons en compte courant faits par les sociétés aux ménages et aux institutions privées sans but lucratif desservant principalement les ménages ou l'Etat ; n'y sont pas enregistrés les paiements et recettes correspondant aux prestations sociales payées directement par l'employeur, et les contributions imputées pour les prestations sociales payées directement par l'employeur ; y

## 16. National disposable income

*In present SNA:* Net receipts of residents from employment, entrepreneurship and property and unrequited current transfers.

*Differences in the former systems.* In the former systems included are (*i*) the bank service charge imputed to households, (*ii*) the operating surplus (net rent) imputed in respect of buildings owned and occupied by the government for civilian purposes, and (*iii*) the transfers to the owners of the total entrepreneurial income of domestic branches of non-residents and the total entrepreneurial income of foreign branches of residents; not recorded are net casualty premiums and claims receivable from, and payable to, the rest of the world; and excluded is the counterpart of transfers in kind of military equipment to, and from, foreign governments.

## 17. Saving

*In présent SNA:* The excess of disbursements over receipts on current account of resident institutions.

*Differences in the former systems.* In the former systems (*i*) outlays on machinery and equipment by private non-profit bodies serving households or government are classed as final consumption, not as fixed capital formation, (*ii*) depreciation is not charged in respect of the machinery and equipment of these private non-profit bodies and of government services, (*iii*) the total entrepreneurial income of domestic branches of non-residents and branches abroad of residents is transfered to the owners, and (*iv*) claims receivable (payable) and net casualty premiums payable (receivable) are not recorded.

## 18. Consumption of fixed capital

*In present SNA:* The normal wear and tear, foreseen obsolescence, and probable (normally expected) rate of accidental damage not made good by repair in all fixed assets valued at current replacement cost. Charges are not included in respect of unforeseen obsolescence or the depletion of natural resources. No attempt should be made to allow for arrears in the consumption of fixed capital because earlier estimates have been at a lower price level. The charge for the probable rate of accidental damage might be based on past experience or on the net premiums paid for such insurance of the fixed assets.

*Differences in the former systems.* In the former systems excluded are charges for the consumption of the machinery and equipment of government services and private non-profit services to households.

## 19. Capital transfers from the rest of the world net

*In present SNA and in the former systems:* Unrequited transfers, in cash or in kind, which are used for purposes of capital formation or other forms of accumulation, are made out of wealth, or are non-recurrent in the case of either party to the transaction. Examples of capital transfers are grants from one government to another to finance deficits in external trade, investment grants, unilateral transfers of capital goods, legacies, death duties and inheritance taxes,

sont inclus en revanche les droits nominaux payés par les ménages aux pouvoirs publics; enfin sont éliminés par consolidation, les transferts entre les institutions privées sans but lucratif desservant principalement les ménages et les ménages eux-mêmes. La classification des transferts courants sans contrepartie dans les anciens systèmes est aussi moins détaillée que celle du nouveau SCN.

## 16. Revenu national disponible

*Dans le nouveau SCN:* Recettes nettes des résidents au titre du revenu de l'emploi, de l'entreprise et de la propriété et du fait des transferts courants sans contrepartie.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes sont inclus: *i*) la rémunération des services bancaires imputée aux ménages, *ii*) l'excédent d'exploitation (loyer net) imputé des bâtiments appartenant aux administrations publiques et occupés par elles à des fins civiles et *iii*) les transferts aux propriétaires du revenu total de l'entreprise de succursales intérieures appartenant à des non-résidents et du revenu total de l'entreprise de succursales à l'étranger appartenant à des résidents; ne sont pas enregistrées les primes nettes et les indemnités d'assurances-dommages à payer au, et à recevoir du, reste du monde; est exclue la contrepartie des transferts en nature de matériel militaire effectués en faveur de, ou reçus de, gouvernements étrangers.

## 17. Epargne nette

*Selon le nouveau SCN:* Excédent des ressources par rapport aux emplois en compte courant des institutions résidentes.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes *i*) les dépenses consacrées aux machines et au matériel par les institutions privées sans but lucratif desservant les ménages ou les administrations publiques sont classées comme consommation finale au lieu d'être considérées comme formation de capital fixe, *ii*) il n'est pas prévu de provisions pour amortissement en ce qui concerne les machines et le matériel de ces institutions et des services des administrations publiques, *iii*) la totalité du revenu d'entreprise des succursales appartenant à des non-résidents et celui des succursales à l'étranger appartenant à des résidents est transférée à leurs propriétaires, et *iv*) les indemnités d'assurances-dommages à recevoir (à payer) et les primes nettes d'assurances-dommages à payer (à recevoir) ne sont pas enregistrées.

## 18. Consommation de capital fixe

*Selon le nouveau SCN:* L'usure normale, l'obsolescence prévisible et le taux probable (raisonnablement escompté) et non-réparable de tous les actifs fixes, l'évaluation étant faite au cours actuel de remplacement. Il n'est pas tenu compte de détérioration accidentelle, de l'obsolescence imprévisible et de l'épuisement des ressources naturelles. On ne doit pas essayer de faire la part d'un arriéré d'amortissement découlant du fait que les estimations antérieures étaient fondées sur des prix moins élevés. Pour faire la part de la détérioration accidentelle probable, on pourra se fonder sur l'expérience déjà acquise ou sur le montant net des primes à payer pour assurer les actifs fixes contre un tel risque.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes les provisions pour consommation des machines et du matériel des administrations publiques et des organismes privés sans but lucratif desservant les ménages ne sont pas comprises.

## 19. Transferts en capital reçus, nets, du reste du monde

*Dans les anciens systèmes et dans le nouveau SCN:* Transferts sans contrepartie, en espèces ou en nature, qui servent à la formation de capital ou à d'autres formes d'accumulation, qui sont prélevés sur la fortune, ou qui ne sont pas périodiques pour l'une des deux parties à l'opération. Comme exemple de transferts en capital, on peut citer les transferts d'un gouvernement à un autre en vue de financer les déficits du commerce extérieur, les subventions

migrants' transfers of fixed or financial assets, indemnities in respect of calamities.

### 20. **Purchases of intangible assets n.e.c., from the r.o.w., net**

*In present SNA :* Purchases, *less* sales, of exclusive rights to mineral, fishing and other concessions, and of leases, patents, copyrights, etc. These transactions involve once-for-all relinquishment and acquisition of the exclusive rights ; not included are concessions, leases, licenses to use patents, permission to use patents, permission to publish copyright materials which involve periodic payments of royalties or rents. The purchases and sales are to be valued at the transaction (sales) value of the mineral concession, leases, patents, etc., not including any involved transfer costs.

*Differences in the former systems.* These transactions are not explicitly included in the flow « net lending » in the former systems.

### 21. **Net lending to the rest of the world**

*In present SNA :* The excess of the sources of finance of accumulation, e.g. saving, capital transfers over the uses of these funds, e.g. gross capital formation and the net acquisition of land ; or the excess of net acquisition of financial assets over the net incurrence of liabilities.

*Differences in the former systems.* The former systems differ primarily because : (*i*) except for the domestic branches of non-residents and the foreign branches of residents, the owners' financing of the gross capital formation of the quasi-corporate enterprises of the present SNA is not treated as a financial transaction, (*ii*) the owners finance the total gross capital formation of these branches, as well as of all other unincorporated enterprises, (*iii*) part of net lending from abroad of a country is the finance of the construction of embassies and other civilian structures by foreign extra-territorial bodies located there and (*iv*) casualty insurance claims receivable (payable), net casualty insurance premiums payable (receivable), and net purchases of intangible assets other than financial claims are not explicitly recorded.

au titre des investissements ou les transferts unilatéraux de biens d'équipement, les donations, les droits de succession, les transferts d'actifs fixes ou d'avoirs financiers faits par les migrants, ou les indemnités versées en cas de calamité.

### 20. **Achats, nets des ventes, au r.d.m., d'actifs incorporels n.d.a.**

*Selon le nouveau SCN :* Achats, moins ventes, de monopoles d'exploitation de gisements miniers, lieux de pêche et autres concessions, de baux, brevets, droits d'auteur, etc. Ces opérations sont des transferts et des acquisitions de caractère définitif de ces droits exclusifs ; les concessions, les baux, les licences d'exploitation de brevets, les autorisations de publier des œuvres faisant l'objet de droits d'auteur, qui entraînent des paiements de redevances ou de loyers, ne sont pas compris. Les achats et ventes doivent être évalués à la valeur de vente de la concession minière, du bail, du brevet, etc., non compris les dépenses de transfert y afférentes.

*Différences entre les anciens systèmes et le nouveau SCN.* Ces opérations ne sont pas explicitement comprises dans le flux « Prêts nets » des anciens systèmes.

### 21. **Capacité de financement de la nation**

*Selon le nouveau SCN :* Excédent des sources de financement de l'accumulation (épargne, transferts en capital) par rapport aux emplois de ces fonds (formation brute de capital et solde des achats et des ventes de terres par exemple) ; ou encore de l'excédent de la variation des créances sur la variation des engagements.

*Différences entre les anciens systèmes et le nouveau SCN.* Dans les anciens systèmes les différences portent sur les points suivants : *i*) sauf dans le cas des succursales appartenant à des non-résidents et des succursales des résidents situées à l'étranger, le financement de la formation brute de capital par les propriétaires des quasi-sociétés dans le nouveau SCN n'est pas classé comme opération financière dans l'ancien SNCN ; *ii*) dans le cas des succursales mentionnées ci-dessus, ainsi que dans celui de toutes les autres entreprises non constituées en sociétés, le montant de prêts octroyés par les propriétaires est équivalent à leur formation brute de capital totale ; *iii*) est inclus dans les prêts nets de l'étranger à un pays le financement de la construction d'ambassades et d'autres bâtiments civils par les organes extra-territoriaux étrangers qui s'y trouvent et *iv*) ne sont pas explicitement enregistrés dans le système les indemnités d'assurances-dommages à recevoir (à payer) et les primes nettes d'assurances-dommages à payer (à recevoir) non plus que le solde des achats et des ventes d'actifs incorporels autres que les créances financières.

## Volume indices

1960 = 100

(Semi-logarithmic scale)

PART TWO

DEUXIÈME PARTIE

# Aggregates and growth triangles
# Agrégats et triangles de croissance

This part presents for each country the following tables:

— Expenditure on the gross domestic product, at current and constant prices.
— National income and national disposable income.
— Capital transactions of the nation.

and growth triangles for the main aggregates of expenditure (volume and price) and for national disposable income and compensation of employees

The first three tables, referring to OECD-Total, OECD-Europe and EEC are in U.S. dollars. The data for the individual countries in each group have been converted into U.S. dollars using 1975 exchange rates. The use of constant exchange rates throughout ensures that year to year movements depend only on movements in the current price data for the countries concerned, and are not affected by fluctuations in exchange rates from one year to the next.

To facilitate inter-country comparisons the constant price data are shown wherever possible at the price levels of 1975. For countries that do not use 1975 as the base year for calculating their constant price series, the constant price data for each aggregate have been scaled up by the ratio in 1975 of the current value of that aggregate to its value at the prices of the base year used by the country concerned. This scaling procedure in no way alters the fact that the constant price series concerned still reflect the *relative* prices of the years actually used. The base years used are given in the tables when they differ from 1975.

Cette partie fournit pour chaque pays les tableaux suivants :

— Produit intérieur brut et ses emplois aux prix courants et aux prix constants.
— Revenu national et revenu national disponible.
— Opérations en capital de la nation.

et des triangles de croissance pour les principaux agrégats de la dépense (volume et prix) et pour le revenu national disponible et la rémunération des salariés.

Les trois premiers tableaux concernant l'OCDE-Total, l'OCDE-Europe et la CEE sont exprimés en dollars des É.-U. Les données des pays composant chaque groupe de pays ont été converties en dollars É.-U. en utilisant les taux de change de 1975. L'utilisation de taux de change constant sur toute la période assure le fait que les variations d'une année à l'autre dépendent uniquement des mouvements des données à prix courants des pays concernés et ne sont pas affectées par les fluctuations des taux de change d'une année à l'autre.

Pour faciliter les comparaisons entre pays, les séries à prix constants sont montrées, autant que possible, aux niveaux de prix de 1975. Pour les pays n'utilisant pas 1975 comme année de base de leurs séries à prix constants, les données à prix constants de chaque agrégat ont été multipliées par le rapport en 1975 de la valeur courante de cet agrégat à sa valeur aux prix de l'année de base utilisée par le pays concerné. Cette procédure ne modifie pas le fait que les séries ainsi rebasées aux prix de 1975 reflètent toujours les prix *relatifs* de l'année de base réellement utilisée. Les années de base utilisées sont précisées dans les tableaux lorsqu'elles diffèrent de 1975.

1. In the National Accounts published by the Service Central de la Statistique et des Études Économiques of Luxembourg imputed bank services provided to non—residents are not deducted in calculating GDP. For this reason, estimates of GDP published by the Luxembourg authorities are somehow higher than those shown here particularly for recent years.

1. Dans les Comptes nationaux publiés par le Service Central de la Statistique et des Études Économiques du Luxembourg les services bancaires imputés fournis par les non—résidents ne sont pas déduits du PIB. Pour cette raison, le PIB publié par les autorités Luxembourgeoises est sensiblement plus élevé que celui montré ici, surtout pour les années récentes.

# Comparative tables

# Tableaux comparatifs

### GEOGRAPHICAL COVERAGE

Yugoslavia, which is an associate Member of O.E.C.D., is excluded from the area totals shown in this part. New Zealand, which became a full Member during 1973, has been included in the area totals. Greece is included in E.E.C.

### POPULATION

Population is defined as all nationals present in or temporarely absent from the country and aliens permanently settled in the country. For further details see *Labour force statistics,* O.E.C.D.

### EXCHANGE RATES

The exchange rates have been calculated by the International Monetary Fund, and are published in *International Financial Statistics.* They are par or market rates averaged over the year.

### CALCULATION PROCEDURES

The following points should be borne in mind in using the tables in Part III of this volume.

*a/* The various aggregates shown in Tables 1 to 18 have been calculated by three different methods: *at current prices and 1975 exchange rates* (Tables 1-6); *at 1975 prices and 1975 exchange rates* (Tables 7-12); and *at current prices and current exchange rates* (Tables 13-18). By using 1975 exchange rates throughout, the year to year movements in the data for a given country or group of countries shown in Tables 1-6 are determined entirely by movements in the national data at current prices. Year to year movements in the data in Tables 13 to 18, however, are liable to be strongly influenced by fluctuations in exchange rates as well as by movements in the national data at current prices. The data in Tables 13 to 18 are, therefore, only suitable for comparisons between countries within a single year, and not for comparisons between years for the same country, or group of countries.

*b/* In the tables giving *volume and price indices* all series are shown with 1975 = 100. In practice many countries use a year before 1975 as their base year for calculating volume and price indices, and the indices shown for these countries (and for groups of countries) are therefore based on the relative prices or quantities of years prior to 1975. The base years used by Member countries are indicated in the country tables where they differ from 1975.

*c/* In these tables the figures for *groups of countries* are arithmetic weighted averages of the component indices using as weights the 1975 current value of the aggregate concerned (GDP, private final consumption expenditure, etc.) expressed in US dollars at 1975 exchange rates. It should be noted that the product of these 2 fixed-weight volume and price indices for groups of countries does not correspond with the aggregates shown at current prices and exchange rates in the later tables.

### COUVERTURE GÉOGRAPHIQUE

La Yougoslavie, pays associé de l'O.C.D.E., n'est pas comprise dans l'O.C.D.E.-Europe et l'O.C.D.E.-Total. La Nouvelle-Zélande, pays membre de l'O.C.D.E. depuis 1973, est comprise dans l'O.C.D.E.-Total. La Grèce est comprise dans la C.E.E.

### POPULATION

La population est définie comme l'ensemble des nationaux présents ou temporairement absents du pays et des étrangers établis en permanence dans le pays. Pour plus de détails, se reporter aux *Statistiques de la population active,* O.C.D.E.

### TAUX DE CHANGE

Les taux de change sont calculés par le Fonds Monétaire International et publiés dans *International Financial Statistics.* Ce taux est une moyenne sur l'année du taux du marché/parité ou taux central.

### MÉTHODES DE CALCUL

Il est nécessaire de souligner les points suivants pour l'utilisation des tableaux de cette troisième partie.

*a/* Les différents agrégats montrés dans les tableaux 1 à 18 ont été calculés de trois façons différentes : *aux prix courants et taux de change de 1975* (tableaux 1-6), *aux prix de 1975 et taux de change de 1975* (tableaux 7-12) et *aux prix courants et taux de change courants* (tableaux 13-18). En utilisant les taux de change de 1975 sur toute la période, les variations d'une année sur l'autre, pour un pays ou groupe de pays, des séries montrées dans les tableaux 1-6 sont déterminées exclusivement par les mouvements des données nationales à prix courants. Par contre les variations calculées à partir des données des tableaux 13-18 sont susceptibles d'être aussi largement influencées par les fluctuations des taux de change que par les mouvements des données nationales à prix courants. Ainsi les données des tableaux 13-18 doivent être utilisées uniquement pour des comparaisons entre pays pour une année particulière, et non pour des comparaisons dans le temps pour le même pays ou groupe de pays.

*b/* Les tableaux *d'indices de volume et de prix* sont montrés avec 1975 = 100. En réalité beaucoup de pays utilisent une année antérieure à 1975 comme année de base pour calculer leurs indices de volume et de prix; et donc les indices montrés pour ces pays (et groupes de pays) sont basés sur des quantités et prix relatifs différents de 1975. Les années de base utilisées par les pays membres sont précisées dans les tableaux par pays quand elles diffèrent de 1975.

*c/* Dans ces tableaux les données concernant les *groupes de pays* sont obtenues comme moyennes arithmétiques des indices par pays pondérés par la valeur courante de 1975 de l'agrégat concerné (PIB, Consommation finale privée, etc.), exprimée en dollars É.-U. aux taux de change de 1975. Il faut noter que le produit de ces deux indices pondérés de volume et de prix ne correspond pas aux agrégats montrés aux prix courants et taux de change courants dans les tableaux qui suivent.

## 1. Gross domestic product in purchasers' values - at current prices and 1975 exchange rates, billions of dollars

## Produit intérieur brut en valeurs d'acquisition - aux prix courants et taux de change de 1975, milliards de dollars

# Estimates of real GDP based on PPPs

# Estimations du PIB réel basées sur les PPA

## INTRODUCTION

It is necessary to convert national accounts data into a common unit of currency,usually the U.S. dollar, in order to compare data for different countries or to aggregate data to obtain totals for the OECD as a whole or other groups of countries. Up to now such conversions have almost invariably been made using exchange rates even though it has long been recognised that exchange rates do not always provide the appropriate factors by which to convert the prices of one country into those of another. It is now possible to use alternative conversion factors as a result of two major enquiries on the purchasing power of different currencies whose results have recently become available. The results of these enquiries are used in this part.

During the 1950's and 1960's when exchange rates were fixed it was known that the use of official exchange rates tended to understate the levels of real GDP in European countries compared with the United States. This was established by the pioneering work of Milton Gilbert and Irving Kravis on international comparisons during the 1950's (1). For example, in the OECD's *Statistics of National Accounts,* 1950-1961, published in 1964, it was stated (p. 34) that "the official exchange rates used to convert European currencies to dollars considerably understate the relative purchasing power of these currencies and consequently seriously distort the comparison of the levels of real national product in Europe with that in the United States". The new estimates used in this Annex confirm that this situation persisted right up to the end of the era of fixed exchange rates in 1971.

With floating exchange rates it might be expected that market exchange rates would reflect the purchasing power of currencies rather more closely, but this is by no means always the case. One consequence of the depreciation of the dollar vis-a-vis several European currencies in the first half of the 1970's was that by 1975 the systematic distortion in comparisons of real GDP between Europe and the United States referred to above was largely eliminated, but other distortions between individual countries remained. While some distortions may disappear in response to movements in market exchange rates, others may remain and new ones are liable to be created.

The instability of international comparisons of real GDP based on floating exchange rates may be illustrated by the following simple example using data from Table 21 in Part III above.

**GDP per capita at current prices and current exchange rates**

| | United States | United Kingdom | United States | United Kingdom |
|---|---|---|---|---|
| | *U.S. dollars* | | *USA = 100* | |
| **1977** ..... | 8641 | 4504 | 100 | 52.1 |
| **1979** ..... | 10585 | 7341 | 100 | 69.4 |

As the real growth of per capita GDP between 1977 and 1979 was about the same in both countries (2.4% for the U.S.A. and 2.7 for the U.K.) it is clear that in real terms *i.e.* interpreted as a measure of the relative volumes of real goods and services produced, the per capita GDP of the U.K. cannot have been 69% of that of the U.S.A. in 1979 if it was only 52% in 1977. One, or perhaps both, of the figures must be misleading from this point of view. In practice, of course, the difference between the two figures is explained by the appreciation of the pound against the dollar between 1977 and 1979, at a time when the domestic rate of inflation was actually much faster in the U.K. than in the U.S.A. Thus, using exchange rates to convert U.K. data into dollars, the prices of goods and services produced within the U.K., *expressed in dollars,* rose considerably between 1977 and 1979 *relatively* to those within the U.S.A. It follows logically that in at least one of these two years the use of exchange rates meant that goods and services produced in the U.K. were being systematically under- or over-valued in dollar terms compared with the prices actually prevailing within the United States (In practice, it seems they were under-valued in 1977).

When comparing national accounts data for different countries, or aggregating them across countries, it is obviously

1. *An International Comparison of National Products and the Purchasing Power of Currencies,* Milton Gilbert and Irving B. Kravis, OEEC, 1954 and *Comparative National Products and Price Levels,* Milton Gilbert and Associates, OEEC, 1958.

necessary that the goods and services produced in different countries should be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities instead of exchange rates is intended to achieve this objective. It must be emphasized, however, that this in no way implies that the purchasing power parities used here can be interpreted as norms or equilibrium levels to which exchange rates may be expected to gravitate. Firstly, the purchasing power parities used here cover the entire range of goods and services produced within countries as distinct from the very much smaller set which are traded internationally. Secondly, there are many other factors besides purchasing power parities which contribute to the determination of equilibrium levels of exchange rates — movements of capital, interest rates, etc.

## THE METHODOLOGY OF INTERNATIONAL COMPARISONS OF REAL GDP

The methodology underlying the data presented in this annex is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices, in much the same way that volume measures over time within a single country can be compiled by utilising a set of constant prices. By dividing the ratio of the GDPs of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power parity, or PPP, between the two currencies concerned. These parities are essentially similar to the implicit price deflators derived from current and constant price data in national accounts. PPPs are therfore international price indices linking the price levels of different countries. They show how many units of currency are needed in one country to buy the same amount of goods and services which one unit of currency will buy in the other country: for example, how many French francs are needed, in general, to buy in France what one U.S. dollar will buy within the United States.

A distinction has to be drawn between specific and general PPPs. As patterns of relative prices vary from country to country the purchasing power of one currency vis-a-vis another will depend upon the way in which the money is spent. For example, goods will tend to have different PPPs from services and food goods from non-food goods, and so on. Two types of PPPs are used here, those for GDP as a whole, and the specific PPPs for private consumption expenditure.

The associated volume measures obtained by converting the GDPs in national currencies into a common currency by means of the PPPs are based on a common set of average international prices, as already mentioned. This implies that no single country exerts an undue influence on the results because the prices used are averages covering all the goods or services produced within the group of countries as a whole. It also ensures that comparisons between pairs of countries within the group are mutually consistent with each other *i.e.,* that the volume and price comparisons are transitive. On the other hand, it also implies that comparisons between individual countries are not based exclusively on prices within the two countries concerned and are therefore not entirely independent of the size and composition of the group to which they belong. This is by no means an undesirable property for a set of measurements made simultaneously for a group of countries in which individual countries are considered as members of a group rather than as isolated independent entities.

It is necessary for one currency to act as the numeraire and the U.S. dollar has been chosen for this purpose as it is commonly used for comparisons based on exchange rates. However, the underlying methodology does not assign any special importance to the United States, the comparisons being invariant to the choice of numeraire currency. As just stated, the prices on which the volume comparisons are based are the average prices for some specified group of countries and not those of the United States.

It is not feasible to describe here the methodology used in full detail. The aggregation method underlying the volume measures presented here is the so-called Geary-Khamis method which is fully described in the publication produced by the United Nations International Comparisons Project (1). An alternative aggregation procedure has been used in the past by the Statistical Office of the European Communities (2).

It is important to stress, however, that there are alternative methodologies which can be used, just as there are many index-number formulae which can be used for purposes of inter-temporal comparisons. For example, it is clear that the average international prices on which the volume measures are based can be defined in several different ways, each method generating a slightly different set of results. Thus, it cannot be claimed that the results presented here are unique. On the other hand, it must be remembered that the existence of a multitude of alternative index number formulae has not prevented inter-temporal price and volume indices from actually being used for purposes of economic analysis and policy making. Furthermore, there is no doubt that the international comparisons of real GDP presented in this annex are, *in general,* much better indicators of the real volumes of goods and services produced in different countries than comparisons based on exchange rates, even though they must be regarded essentially as *estimates* which may be influenced by deficiencies in the underlying data as well as by choice of methodology.

## THE DATA AND THEIR SOURCES

The PPPs used in this Annex have been derived from two different sources. The first consists of a set of PPPs for 1980 for 12 European OECD Countries, calculated by the Statistical Office of the European Communities (Eurostat) in collaboration with the national statistical offices of the countries concerned. These cover the ten member countries of the EEC, plus Spain and Portugal.

The change in the PPP between any pair of countries from one year to the next is determined by the relative rates of inflation in the two countries. This enables the GDP PPPs for a bench-mark year to be updated, or backdated, to other years by means of the GDP price deflators for the countries concerned. In this way, the bench-mark PPPs for 1980 calculated by Eurostat were backdated year by year to 1970. Eurostat has followed the same procedure. Thus, all the GDP PPPs among the 12 countries concerned for the years 1970 to 1982 are identical with those published by Eurostat in "National Accounts ESA — Aggregates, 1960-1982". The PPPs shown here are against the U.S. dollar whereas the Eurostat PPPs are against the EECs "purchasing power standard". However, the implicit PPPs between any specific pair of countries are identical in both sets of data.

In order to extend the data to a further three OECD countries, the United States, Japan and Austria, use was made of the results obtained by the United Nations International Comparisons Project, or ICP, for 1975. These results were published in 1982 (1), covering 34 countries throughout the world, including 13 OECD countries. Greece and Portugal were not included in the ICP but PPPs for these two countries were linked to the ICP figures by using Eurostat's PPPs backdated to 1975, thereby bringing the total number of OECD countries upto 15. The PPPs for the remaining nine OECD countries in 1975 were estimated by a variant of the so-called "short-cut" method (3). These PPPs, being based on econometric estimation rather than direct price observations, are not shown here and they were used simply in order to estimate the total GDP for the OECD as a whole. The resulting complete set of PPPs for 1975 based on ICP data were then backdated to 1970 and updated to 1982.

1. See, for example, Irving B. Kravis, Alan Heston, Robert Summers; *World Product and Income: International Comparisons of Real Gross Product,* produced by The Statistical Office of the United Nations and The World Bank (Johns Hopkins Univ. Press, 1982).

2. See, Eurostat; *Comparison in Real Value of the Aggregates of the ESA, 1975,* Statistical Office of the European Communities, 1978.

3. Irving B. Kravis, Alan Heston and Robert Summers; "Real GDP per Capita for more than One Hundred Countries", *Economic Journal, June 1978.*

To obtain the PPPs for total GDP, the data for the United States, Japan and Austria were linked onto the 12 European OECD countries covered by Eurostat in the following way. In the data presented here, the ratio of the total GDP of the 12 European countries to the total GDP of the OECD as a whole is that given each year by the augmented ICP data just described. This means that the ratio of GDP of the United States, or Japan, or Austria to the total GDP of the 12 European countries is determined entirely by the United Nations ICP results based on their 1975 bench-mark enquiry. This in turn implies that these particular comparisons are based on average world prices. On the other hand, the disaggregation of the total GDP of the 12 European countries among themselves is based on the Eurostat 1980 enquiry so that the volume ratios for the GDP's of any two of these countries are calculated using average European prices. These ratios are therefore the same as those published by Eurostat, in accordance with the wishes expressed by the statistical offices of the countries concerned.

A procedure analogous to that described above was used to obtain the specific PPPs for private consumption expenditure (see Tables 8 to 14).

This solution is not ideal from a theoretical point of view but it does make the maximum use possible of all the new data which have recently become available. The procedure whereby the results for the United States, Japan and Austria have been linked onto the other 12 OECD countries covered by Eurostat's enquiry means that comparisons between these three countries and the other 12 countries are not so straightforward as those among the 12 on their own, but linking procedures of this kind are both common and accepted in other fields of statistics when extended comparisons are required, especially over long periods of time.

Because it is not possible to obtain PPPs calculated in the same way for all the member countries of the OECD the estimates shown here for some countries must be treated as provisional. This applies particularly to comparisons between the United States, Japan and Austria and the other 12 countries. It is hoped that new bench-mark data for 1980 will become available for other OECD countries in the future thereby making it possible in due course to extend the range and improve the quality and detail of the comparisons for the OECD group of countries.

# ESTIMATIONS DU PIB RÉEL BASÉES SUR LES PARITÉS DE POUVOIR D'ACHAT

## INTRODUCTION

Il faut convertir les statistiques des comptes nationaux dans une monnaie commune (généralement le dollar É.-U.) afin de faire des comparaisons entre les différents pays ou d'agréger les données en vue d'obtenir des totaux relatifs à l'OCDE et à d'autres groupes de pays. Jusqu'à maintenant de telles conversions ont été effectuées à l'aide des taux de change, bien qu'il ait été reconnu depuis longtemps que les taux de change ne sont pas toujours appropriés pour transformer les prix d'un pays en prix d'un autre. Il est maintenant possible d'utiliser d'autres facteurs de conversion à la suite de deux enquêtes importantes sur les pouvoirs d'achat des différentes monnaies, dont les résultats viennent de sortir. Ces nouvelles données ont été utilisées dans cette publication.

Dans les années 50 et 60, quand les taux de change étaient fixes, il était admis que l'utilisation des taux de change officiels avait pour tendance de sous-estimer le niveau du PIB européen par rapport aux États-Unis. Ce fait a été bien démontré par MM. Milton Gilbert et Irving Kravis dans leur étude de défrichage sur les comparaisons internationales pendant les années 50 (1). Par exemple, dans la publication *Statistiques des Comptes Nationaux 1950-1961,* publiée par l'OCDE en 1964, il a été noté (page 34) que «L'utilisation des taux de change officiels pour convertir les monnaies européennes en dollars É.-U. risque de sous-estimer fortement le pouvoir d'achat relatif de ces monnaies, et a pour conséquence de fausser les comparaisons du niveau du produit national réel en Europe par rapport à celui des États-Unis». Les nouvelles estimations données dans cette partie de la publication montrent que ce problème persistait jusqu'à 1971 au moment où le système de taux fixes a été abandonné.

Dans une période où les taux de change flottent, on peut supposer que les taux de change du marché reflèteraient mieux les parités de pouvoir d'achat, mais ceci n'est pas toujours le cas. En conséquence de la dépréciation du dollar vis-à-vis de plusieurs monnaies européennes pendant la première partie des années 70, les déviations systématiques dans les comparaisons du PIB réel entre l'Europe et les États-Unis n'existaient plus en général après 1975, mais pour certains pays d'autres déviations subsistaient. Bien que certaines déviations soient éliminées par les mouvements des taux de change du marché, d'autres peuvent persister, et des nouvelles déviations risquent d'être créées.

L'instabilité des comparaisons internationales du PIB réel basées sur les taux de change flottants peut être illustrée par un exemple simple fondé sur les chiffres du Tableau 21 de la Partie III ci-dessus.

**PIB par habitant aux prix et taux de change courants**

| | États-Unis | Royaume-Uni | États-Unis | Royaume-Uni |
|---|---|---|---|---|
| | *Dollars É.-U.* | | *É.-U. = 100* | |
| **1977** ..... | 8641 | 4504 | 100 | 52.1 |
| **1979** ..... | 10585 | 7341 | 100 | 69.4 |

La croissance réelle du PIB par habitant entre 1977 et 1979 ayant été du même ordre dans les deux pays (2,4% aux États-Unis et 2.7% au Royaume-Uni), il est bien évident qu'en termes réels, c'est-à-dire, considérés comme mesure du volume relatif de biens et de services réels, le PIB par habitant du Royaume-Uni ne peut avoir été de 69% de celui des États-Unis en 1979 s'il n'en représentait que 52% en 1977. L'un des deux chiffres, sinon tous les deux, doit être trompeur de ce point de vue. En pratique naturellement l'écart entre les deux chiffres s'explique essentiellement par l'appréciation de la Livre Sterling par rapport au dollar entre 1977 et 1979 pendant une période où le taux d'inflation était beaucoup plus élevé au Royaume-Uni qu'aux États-Unis. En conséquence, l'utilisation des taux de change pour convertir les données du Royaume-Uni en dollars avait pour résultat qu'en termes du dollar les prix des biens et services produits au Royaume-Uni augmentaient considérablement en comparaison avec ceux des États-Unis. Il s'ensuit logiquement que, pour au moins une de ces deux années, l'utilisation des taux de change a dû sous-estimer ou surestimer d'une façon systématique les biens et services produits dans le Royaume-Uni par rapport aux prix pratiqués aux États-Unis (en réalité, il semble qu'ils étaient sous-évalués en 1977).

1. *An International Comparison of National Products and the Purchasing Power of Currencies,* Milton Gilbert and Irving B. Kravis, OEEC, 1954 and *Comparative National Products and Price Levels,* Milton Gilbert and Associates, OEEC, 1958.

Pour faire des comparaisons entre les données de comptes nationaux de différents pays, ou pour calculer les totaux pour des groupes de pays, il est évident que les biens et services produits dans les pays différents doivent être évalués aux mêmes prix afin que les différences observées reflètent les différences réelles dans la production de biens et services. C'est pour obtenir ce résultat que l'on utilise les parités de pouvoir d'achat au lieu des taux de change. Il faut souligner toutefois, que cela ne veut pas dire que ces parités de pouvoir d'achat peuvent être prises comme des «normes» ou des niveaux d'équilibre auxquels les taux de change doivent normalement s'approcher. Tout d'abord, les pouvoirs d'achat que nous avons employés dans cette partie se réfèrent à toute la gamme des biens et services produits dans les pays et non pas au groupe de biens et services qui entre dans le commerce international, et qui est beaucoup plus restreint. D'autre part, nombreux sont les facteurs qui, outre les parités de pouvoir d'achat, contribuent à la détermination du niveau d'équilibre des taux de change (mouvements de capitaux, taux d'intérêt, etc.).

## LA MÉTHODOLOGIE DES COMPARAISONS INTERNATIONALES DU PIB RÉEL

La méthodologie sur laquelle sont basées les statistiques de cette partie consiste essentiellement à élaborer directement des mesures de volume en réévaluant les biens et services vendus dans les différents pays sur la base d'une série commune de prix internationaux, sensiblement de la même façon que l'on mesure les variations de volume dans le temps à l'intérieur d'un même pays en utilisant une série de prix constants. En divisant le rapport des PIB de deux pays exprimés en monnaies nationales par le rapport correspondant calculé aux prix internationaux constants, on peut dériver les parités de pouvoir d'achat, ou PPA, entre les monnaies considérées. Ces parités sont essentiellement semblables aux indices implicites de prix dérivés des statistiques des comptes nationaux à prix courants et à prix constants. Les PPA sont donc des indices de prix internationaux reliant entre eux les niveaux de prix de différents pays qui montrent combien d'unités monétaires il faut dans un pays pour acheter la même quantité de biens et de services que permet d'acquérir une unité monétaire dans l'autre pays; par exemple, combien de francs français il faut en général pour acheter en France ce que l'on peut obtenir aux États-Unis pour un dollar américain.

Il faut établir une distinction entre les PPA spécifiques et générales. Comme les structures des prix relatifs varient d'un pays à l'autre, le pouvoir d'achat d'une monnaie vis-à-vis d'une autre dépendra de la façon dont les fonds sont utilisés. Par exemple, les biens tendront à avoir des PPA différentes de celles des services et les produits alimentaires n'auront pas les mêmes PPA que les produits non alimentaires, etc. Deux types de PPA ont été utilisés dans cette section, ceux qui portent sur le PIB total, et des PPA spécifiques portant sur la consommation privée.

Les mesures correspondantes de volume, obtenues en convertissant les PIB en monnaies nationales dans une monnaie commune à l'aide des PPA, sont fondées, comme on l'a déjà indiqué, sur une série commune de prix internationaux moyens. Cela implique qu'aucun pays n'exerce d'influence injustifiée sur les résultats parce que les prix utilisés sont les prix moyens couvrant tous les biens et services produits dans le groupe de pays considérés comme un tout. Cela garantit aussi que les comparaisons bilatérales entre tous les pays du groupe sont compatibles entre elles, en d'autres termes, que les comparaisons de volume et de prix sont transitives. Il s'ensuit également que les comparaisons entre pays individuels ne sont pas fondées exclusivement sur les prix pratiqués dans les deux pays considérés, et ne sont donc pas entièrement indépendantes de l'importance et de la composition du groupe auquel ces pays appartiennent. Ce n'est pas là nécessairement une caractéristique indésirable pour une série de comparaisons multilatérales calculées pour un groupe de pays dans lequel chaque pays est considéré comme un membre du groupe et non pas comme une unité indépendante et isolée.

Il faut qu'une monnaie serve de numéraire, et le dollar des États-Unis a été choisi à cet effet parce que c'est la monnaie généralement utilisée pour les comparaisons fondées sur les taux de change. Fondamentalement, toutefois, la méthodologie retenue n'accorde pas plus d'importance aux États-Unis qu'à tout autre pays, les comparaisons n'étant pas affectées par le choix du numéraire. Comme on vient de l'indiquer, les prix sur lesquels sont fondées les comparaisons de volumes sont les prix moyens du groupe de pays considéré et non les prix des États-Unis.

Il n'est pas possible de décrire ici en détail les méthodes utilisées. La méthode d'agrégation utilisée pour obtenir les mesures de volume présentées dans cette partie est celle de Geary-Khamis, qui est exposée en détail dans les publications du Projet de comparaison internationale des Nations Unies (1). Une autre méthode a été employée par l'Eurostat dans le passé (2).

Il est à noter, toutefois, qu'il y a d'autres méthodes pour établir les parités de pouvoir d'achat, de la même façon qu'il existe plusieurs types d'indices pour faire les comparaisons intertemporelles. Par exemple, il est évident que les prix internationaux moyens utilisés pour calculer les mesures de volume peuvent être définis de plusieurs façons différentes, et chaque méthode donnera des résultats légèrement différents. En conséquence, on ne peut pas dire que les résultats présentés ici ont un caractère unique. D'autre part, il faut rappeler que l'existence de plusieurs différentes formules d'indice n'empêche pas l'utilisation des indices intertemporels de prix et de volume pour les fins de l'analyse et de la politique économiques. En plus, il est clair que les comparaisons internationales du PIB réel présentées dans cette partie sont, en général, beaucoup plus fiables comme indicateurs du volume réel des biens et services produits dans les différents pays que les comparaisons effectuées à l'aide des taux de change même si elles doivent être essentiellement considérées comme des *estimations,* qui peuvent être influencées par quelques défauts des données de base ainsi que par le choix de méthodologie.

## LES DONNÉES ET LEURS SOURCES

Les PPA utilisées dans cette partie de la publication ont été calculées à partir de deux sources différentes. La première est une série de PPA calculées en 1980 pour douze pays de l'OCDE par l'Office Statistique des Communautés Européennes ou Eurostat, en collaboration avec les instituts nationaux des pays concernés. Les pays couverts sont les dix pays membres de la CEE, plus l'Espagne et le Portugal.

La variation de la PPA entre deux pays quelconques d'une année à la suivante est déterminée par les taux d'inflation relatifs des deux pays. On peut donc, à partir des PPA d'une année de référence, extrapoler les PPA des années postérieures ou antérieures, au moyen des indices implicites de prix du PIB pour les pays concernés. C'est ainsi qu'à partir des PPA de référence 1980 calculées par Eurostat, on a établi les parités de pouvoir d'achat de chacune des années antérieures en remontant jusqu'en 1970. Eurostat a suivi la même méthode. Toutes les PPA entre les douze pays considérés pour les années 1970 à 1982 sont donc identiques à celles publiées par Eurostat dans « Comptes nationaux SEC — Agrégats, 1960-1982 ». Les PPA indiquées ici sont calculées vis-à-vis du dollar tandis que celles d'Eurostat le sont vis-à-vis du «standard de pouvoir d'achat» de la CEE. Cependant, les PPA implicites entre deux pays quelconques sont identiques dans les deux séries de données.

Afin d'obtenir des données pour trois autres pays de l'OCDE, les États-Unis, le Japon et l'Autriche, on s'est servi des résultats du Projet de comparaison internationale des Nations-Unies, ou PCI, pour 1975. Les résultats ont été publiés en 1982 (1), couvrant 34 pays de toutes les régions du monde, dont 13 pays de l'OCDE. La Grèce et le Portugal n'étaient pas compris dans le PCI mais les PPA pour ces deux pays ont été reliées aux chiffres du PCI en calculant à partir des chiffres d'Eurostat les PPA des années antérieures jusqu'à 1975, ce qui a permis de porter à 15 le nombre de pays de l'OCDE couverts. Les PPA pour

1. Irving B. Kravis, Alan Heston, Robert Summers; *World Product and Income: International Comparisons of Real Gross Product,* préparé par l'Office Statistique des Nations-Unies et la Banque Mondiale (John Hopkins, University Press, 1982).

2. Eurostat; *Comparaisons en valeur réelles des agrégats du SEC, 1975.* Office Statistique des Communautés Européennes, 1978.

les neufs pays restants de l'OCDE en 1975 ont été estimées à l'aide d'une méthode «abrégée» (1). Ces PPA fondées sur une estimation économétrique et non sur des observations directes des prix ne sont pas présentées ici; on les a utilisées simplement pour obtenir des totaux pour l'ensemble des pays de l'OCDE. De la série complète des PPA ainsi obtenues pour 1975 sur la base des données du PCI, on a alors extrapolé celles des années antérieures et postérieures à 1975, jusqu'en 1970 et 1982 respectivement.

Afin d'obtenir les PPA pour le PIB total, les données des États-Unis, du Japon et de l'Autriche ont été reliées à celles des douze pays inclus dans l'étude de l'Eurostat de la façon suivante. Dans les statistiques présentées ici, le rapport entre le total du PIB pour les douze pays européens et le total du PIB pour tous les pays de l'OCDE reste le même que celui obtenu chaque année avec les données du PCI élargies de la manière décrite ci-dessus. Cela implique que le rapport des PIB des États-Unis, du Japon, et de l'Autriche au total du PIB des douze pays européens a été déterminé par les résultats du PCI des Nations-Unies, sur la base de leur enquête en 1975. En conséquence, toutes les comparaisons entre ces trois pays et le total des douze autres pays sont basées sur les prix mondiaux. D'autre part les données relatives aux douze pays européens dépendent de l'enquête de 1980 menée par l'Eurostat, de sorte que le rapport du PIB réel entre deux de ces pays est basé sur les prix moyens européens. Ces derniers rapports sont donc identiques à ceux publiés par l'Eurostat conformément aux souhaits exprimés par les pays concernés.

Une procédure analogue à celle décrite ci-dessus a été appliquée pour obtenir les PPA spécifiques pour la consommation privée (voir les tableaux 8 à 14).

Cette solution n'est pas idéale d'un point de vue théorique, mais elle permet d'utiliser au maximum toutes les nouvelles données devenues disponibles récemment. La méthode par laquelle les résultats relatifs aux États-Unis, au Japon et à l'Autriche ont été raccordés à ceux des douze autres pays de l'OCDE couverts par l'enquête d'Eurostat implique que les comparaisons entre ces trois pays et les douze autres ne sont pas aussi directes que celles entre les 12 pays, mais les raccords de ce genre sont à la fois d'usage courant et admis dans d'autres secteurs statistiques lorsqu'il s'agit d'établir des comparaisons étendues, notamment sur les périodes prolongées.

Parce qu'il n'est pas possible d'obtenir des PPA selon le même mode de calcul pour tous les pays membres de l'OCDE, les estimations présentées ici pour certains pays doivent être considérées comme provisoires. Cette remarque s'applique en particulier aux comparaisons entre les États-Unis, le Japon et l'Autriche et les douze autres pays. On espère que de nouvelles données de base portant sur 1980 deviendront disponibles prochainement pour d'autres pays de l'OCDE, ce qui permettra d'élargir en temps utile le champ, et d'améliorer la qualité et le détail, des comparaisons concernant le groupe de pays de l'OCDE.
